Sources of risk and vulnerabilities for financial stability

SUERF/ESM workshop
“Safeguarding Macro & Financial Stability in a Fragile Environment – transmission channels”

16 November 2023

Cornelia Holthausen
Directorate General Macroprudential Policy and Financial Stability
Context: A fragile macro-financial and geopolitical environment

- Tighter financing conditions are gradually propagating to the real economy, with the full impact yet to materialise
- Renewed flare-up of geopolitical tensions could adversely impact macro-financial conditions

Composite funding costs across euro area economic sectors
Jan. 2011 – Sep. 2023, percentages

Financial conditions and manufacturing PMIs for the euro area and US
Jul. 2020 – Sep. 2023, diffusion index, percentages

Geopolitical risk index and oil price volatility
1 Jan. 2015 – 20 Oct. 2023, indices, 7-day moving averages

Sources: ECB(MIR), ECB and ECB calculations
Sources: Bloomberg Finance L.P., S&P Global Market Intelligence and ECB calculations
Sources: Caldara and Iacoviello (2022) and ECB (PDF)
Corporate, household and sovereign resilience tested by higher interest rates

Strong bank performance set to face asset quality and funding cost headwinds

Markets and non-banks vulnerable to negative surprises
1. Corporate, household and sovereign resilience tested by higher interest rates

- Tighter financing conditions have led to a material drop in firms’ demand for external financing
- Expected default frequencies are on the rise, especially for a cohort of more vulnerable firms

Financing flows of non-financial firms by funding instrument
2020-23, € billions

Sources: ECB (BSI), ECB(CSEC). Notes: 2023 figures capture the period January to August.

Corporate EDFs by rating category in the euro area
1 Apr. 2013-20 Oct. 2023, percentages

Sources: Moody’s, Compustat and ECB calculations.

Stock prices of real estate firms versus the overall market

Sources: Bloomberg Finance L.P. and ECB.
1. Corporate, household and sovereign resilience tested by higher interest rates

- Residential real estate markets continued to cool, as higher funding costs weigh on affordability
- Further corrections cannot be excluded and could compound household vulnerabilities

House price patterns in the euro area
Index: Jan. 2020 = 100

Overvaluation estimates for residential real estate across euro area countries
Q4 2019, Q2 2022, Q2 2023, percentages

Interest debt service to income (IDSTI) ratio of households
Q1 2003 – Q2 2023, percentages

Sources: CB, Europace (Germany), Statistics Netherlands, Central Statistics Office (Ireland), Confidencial Imobiliário (sourced from BIS, Portugal), Arco Real Estate (Latvia), meilleursagents.com (France), immobiliare.it (Italy), indomio.es (Spain), Finish Statistics office, hbs.sk (Slovakia) and ECB calculations.

Source: ECB
1. Corporate, household and sovereign resilience tested by higher interest rates

- Strong issuance by euro area sovereigns has been smoothly absorbed by the market so far
- Higher funding costs and less prudent fiscal policies could reignite sovereign debt sustainability concerns

Net issuance of government debt securities in the euro area

General government debt, budget balance and rating outlooks across the euro area
2023-24, percentages of GDP

Source: ECB.

Sources: Moody’s, S&P, Fitch, European Commission (AMECO).
2. Strong bank performance set to face asset quality and funding cost headwinds

- Bank profits have increased further, primarily driven by strengthened net interest income
- Greatest margin expansion observed where loans are contracted at floating rates and where deposit betas are low

Euro area banks’ cost of equity, return on equity and price-to-book ratios
Q1 2015 – Q2 2023, percentages

2. Strong bank performance set to face asset quality and funding cost headwinds

- Notable cooling of bank credit demand, resulting in substantially lower lending flows to households and firms
- Asset quality set to weaken, and bank funding costs set to rise further as bonds reprice and deposit betas adjust

Year-to-date loan flows to households and non-financial corporations
2003-23, € billions

<table>
<thead>
<tr>
<th>Year-to-Date Loan Flows to Households and Non-Financial Corporations</th>
<th>Annualised Quarterly Default Rates on Banks’ Retail and Corporate Exposures</th>
<th>Current and Outstanding Rates on Bank Deposits and Bonds</th>

3. Markets and non-banks vulnerable to negative surprises

- Implied volatility and risk premia have been unusually low in financial markets
- Risk sentiment remains sensitive to negative inflation and/or growth surprises

**Market-implied short-term interest rate expectations**
31 May 2023, 23 Oct. 2023, percentages

**VSTOXX box plots split by direction of PMI**

**Euro area equity market risk premium versus composite PMI**
Jan. 2012 – Sep. 2023, index, percentage points

Implied volatility and risk premia have been unusually low in financial markets, with risk sentiment remaining sensitive to negative inflation and/or growth surprises.
3. Markets and non-banks vulnerable to negative surprises

- Despite continued de-risking, the portfolios of non-banks are vulnerable to increases in credit risk
- Investment funds may amplify any adverse market dynamics given structurally low liquidity buffers

Drivers of euro area NBFI sector bond portfolio dynamics by credit rating
Q1 2020 – Q2 2023; left: € trillions; right: percentages

Distribution of funds’ HQLA stock and worst outflows
Q2 2023 (HQLA), Jan. 2007-June 2023 (outflows), percentage of total net assets

Macroprudential policy: preserve existing resilience

Macroprudential action since the pandemic has increased the banking sector’s resilience

Challenging environment for macroprudential policy
- Elevated uncertainty
- Signs of turning financial cycle
- High accumulated vulnerabilities

Ensure banking sector resilience

Capital-based measures
- Maintain existing capital buffers
- Consider targeted increases, avoiding procyclical effects
- Banks should not increase pay-out ratios

Borrower-based measures
- Ensure sound lending standards and sustainable debt
- Complement capital-based measures
- Flexibility may be used to guarantee availability of credit
Strengthen the already robust and comprehensive EU regulatory framework for banks

Recent turmoil in the US and Swiss banking sectors calls for broad and consistent application in all jurisdictions of global regulatory reforms

Full, faithful and timely implementation of Basel III

- Ensure that banks continue to be well-capitalised
- Foster trust in EU banking system
- Additional levers for supervisory scrutiny

Completing the banking union remains a key priority

- Advance EU reform of bank crisis management and deposit insurance
- Establish common backstop to the Single Resolution Fund
- Introduce a European Deposit Insurance Scheme
- Implement a framework for liquidity in resolution in accordance with FSB Guiding Principles and international best practices

AT1 and creditor hierarchy in EU resolution framework

- In EU, AT1 instruments are written down or converted if CET1 ratio falls below thresholds
- Capital instruments do not have permanent contractual write-down clauses activated in case of public support
- EU resolution framework: detail creditor hierarchy if troubled bank bears losses
- This sequence has been consistently applied in past cases and will continue to guide the actions of ECB and SRB in future crisis interventions
Non-banks – need for a comprehensive policy response

Persistent structural vulnerabilities and the risk of renewed stress make it vital to enhance the resilience of the non-bank financial sector

Mitigating liquidity mismatch in open-ended funds

• Aligning redemption terms with asset liquidity
• Making greater use of anti-dilution liquidity management tools to mitigate first-mover advantages
• Ensuring sufficient amounts of liquid assets

Addressing risks from non-bank leverage

• Need for a holistic perspective across NBFI sector entities and activities
• Restricting leverage at the entity level
• Strengthening risk management practices at prime brokers/dealer banks
• (Re-) considering the role of haircuts and margins
• Enhancing data and leverage metrics

Enhancing non-banks’ liquidity preparedness to meet margin and collateral calls

• Increased transparency of margining, especially for clients
• Better governance and contingency planning for adverse scenarios
• More robust stress testing
• Ensuring adequate levels and diversification of liquidity buffers

➢ International policy coordination is key
➢ Authorities should take an active role in identifying and addressing emerging risks
