SOURCE: McKinsey Global Payments Practice

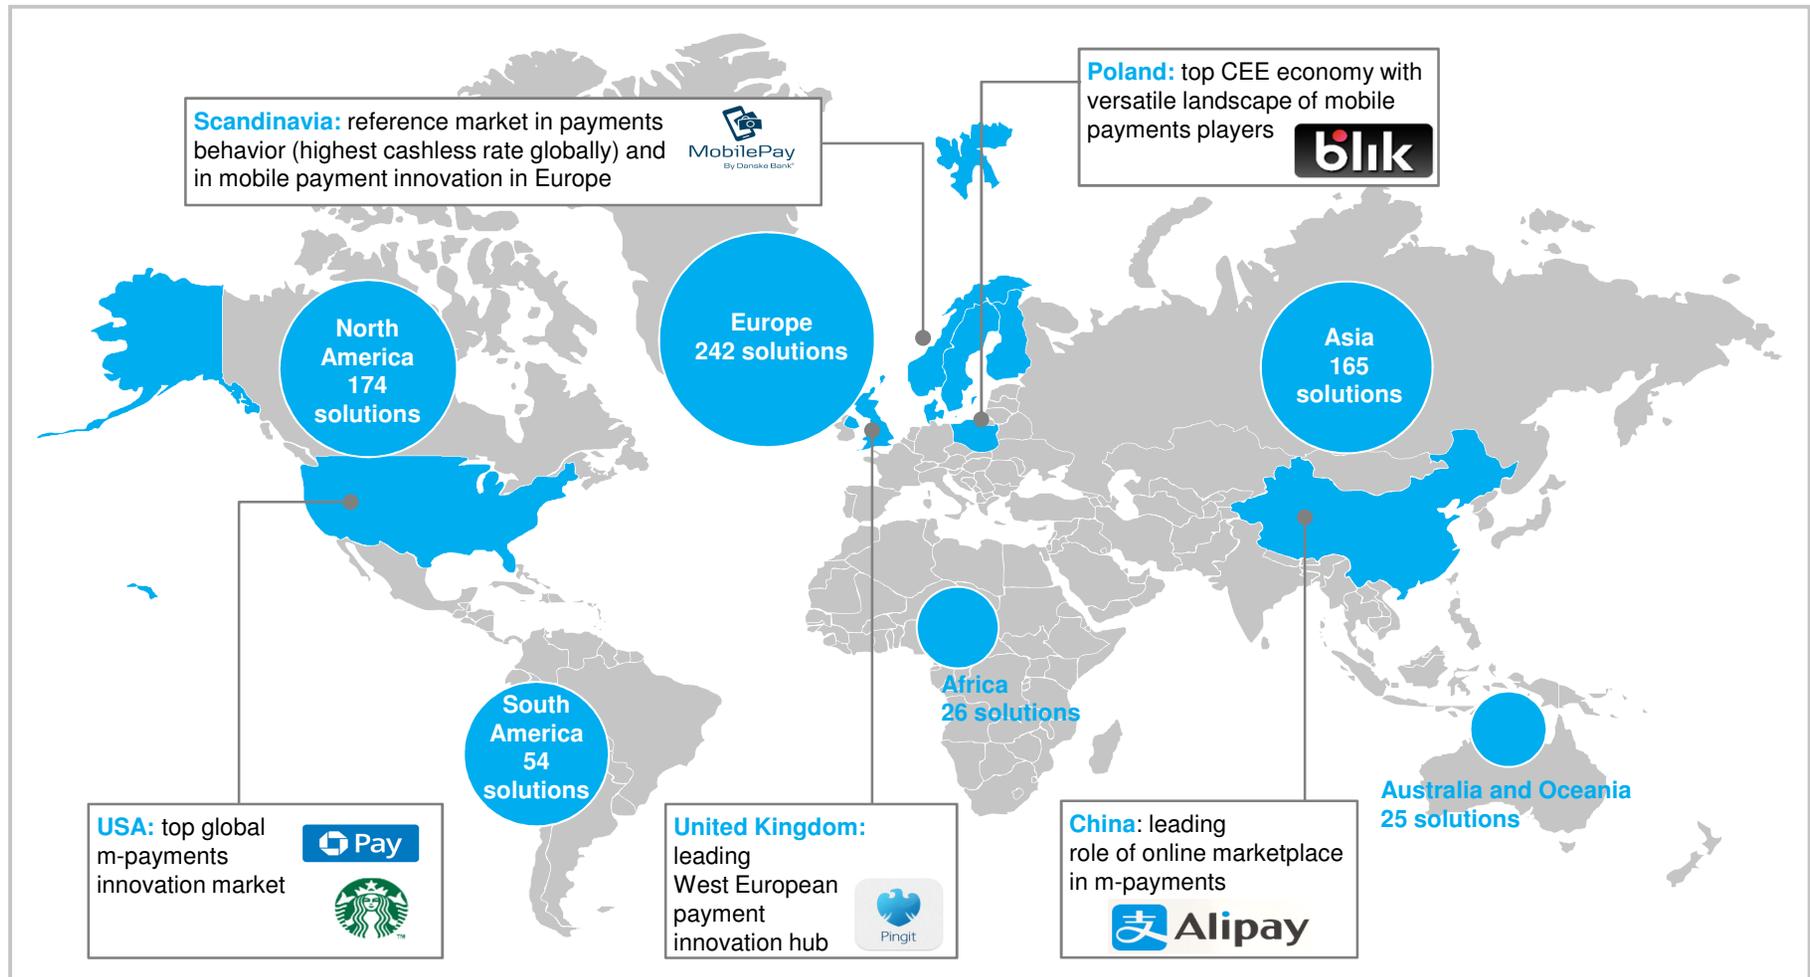

Changing face of payments is not only limited to consumer-facing space, but also rapidly creeping up to SME and corporate payments

Disruption in cross-border is creeping up from C2C to SME and B2B...

~690 mobile payment Fintech attackers already identified across the Globe

● Size of the bubble indicate number of m-payments solutions identified within McKinsey database

Players with large customer base (e.g. GAFAs) are formidable competitors

Examples of non-bank giants active in Fintechs

Started with **e-commerce** and recently moved into **payments, loans, investments, and cloud services**

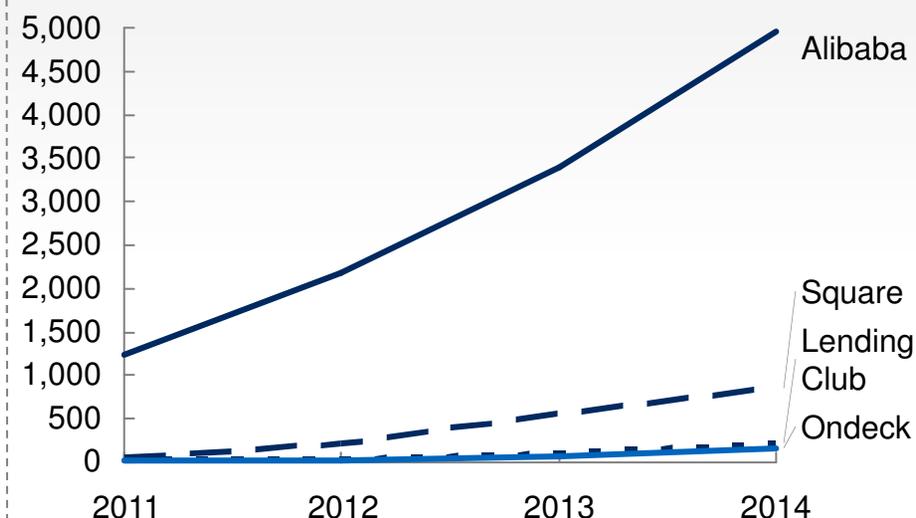

- **Disrupting:**
- **online/mobile payments**
Dominating e-commerce payments (49% online, 73% mobile market share)
- **SME loans**
Granting SME loans based on traffic; repayments through float money

Started with **instant messaging** and recently moved into **payments and investments**

- **Disrupting online/mobile payments,** rapidly gaining market share (19% online, 4% mobile market share within 3 years)

Financial services revenues of selected players
2011–2014, USD bn

- Revenue size and speed of growth of non-bank giants are well beyond those of startups p.ex. Alibaba is 40 times larger in financial services revenues than the median top 20 Fintechs startup
- GAFAs could follow this trend and capture quickly significant market shares

1 Google, Apple, Facebook, Amazon; Microsoft may be added to the list after it took over LinkedIn

... the battle for new payment solutions will however not be fought over technology, but over solutions...

A wide variety of payments technologies are emerging

Consumer payment devices

Cards

- Card details stored in electronic chip

mWallets

- Card details stored on mobile
- Bank account details stored on mobile
- Digital account details stored on mobile

Payment acceptance devices

Card terminals

- Chip reader used to access card details

mPOS card reader

- Chip reader used to access card details

Card terminals (NFC)

- NFC terminal accesses card/account details stored on mobile phones

Other contactless

- Terminal accesses mobile device using e.g., Bluetooth or WiFi

QR-based

- Customer generates or scans QR-code to initiate payment

In-app and cloud-based

- Transaction concluded on mobile, no terminal needed

Banks should not set on one hyped technology as solution space is increasingly fragmented and no winner has yet emerged

New commerce solutions likely to define technology requirements

New trade

Virtual stores

Social feedback

Customization

Social rewards and gamification

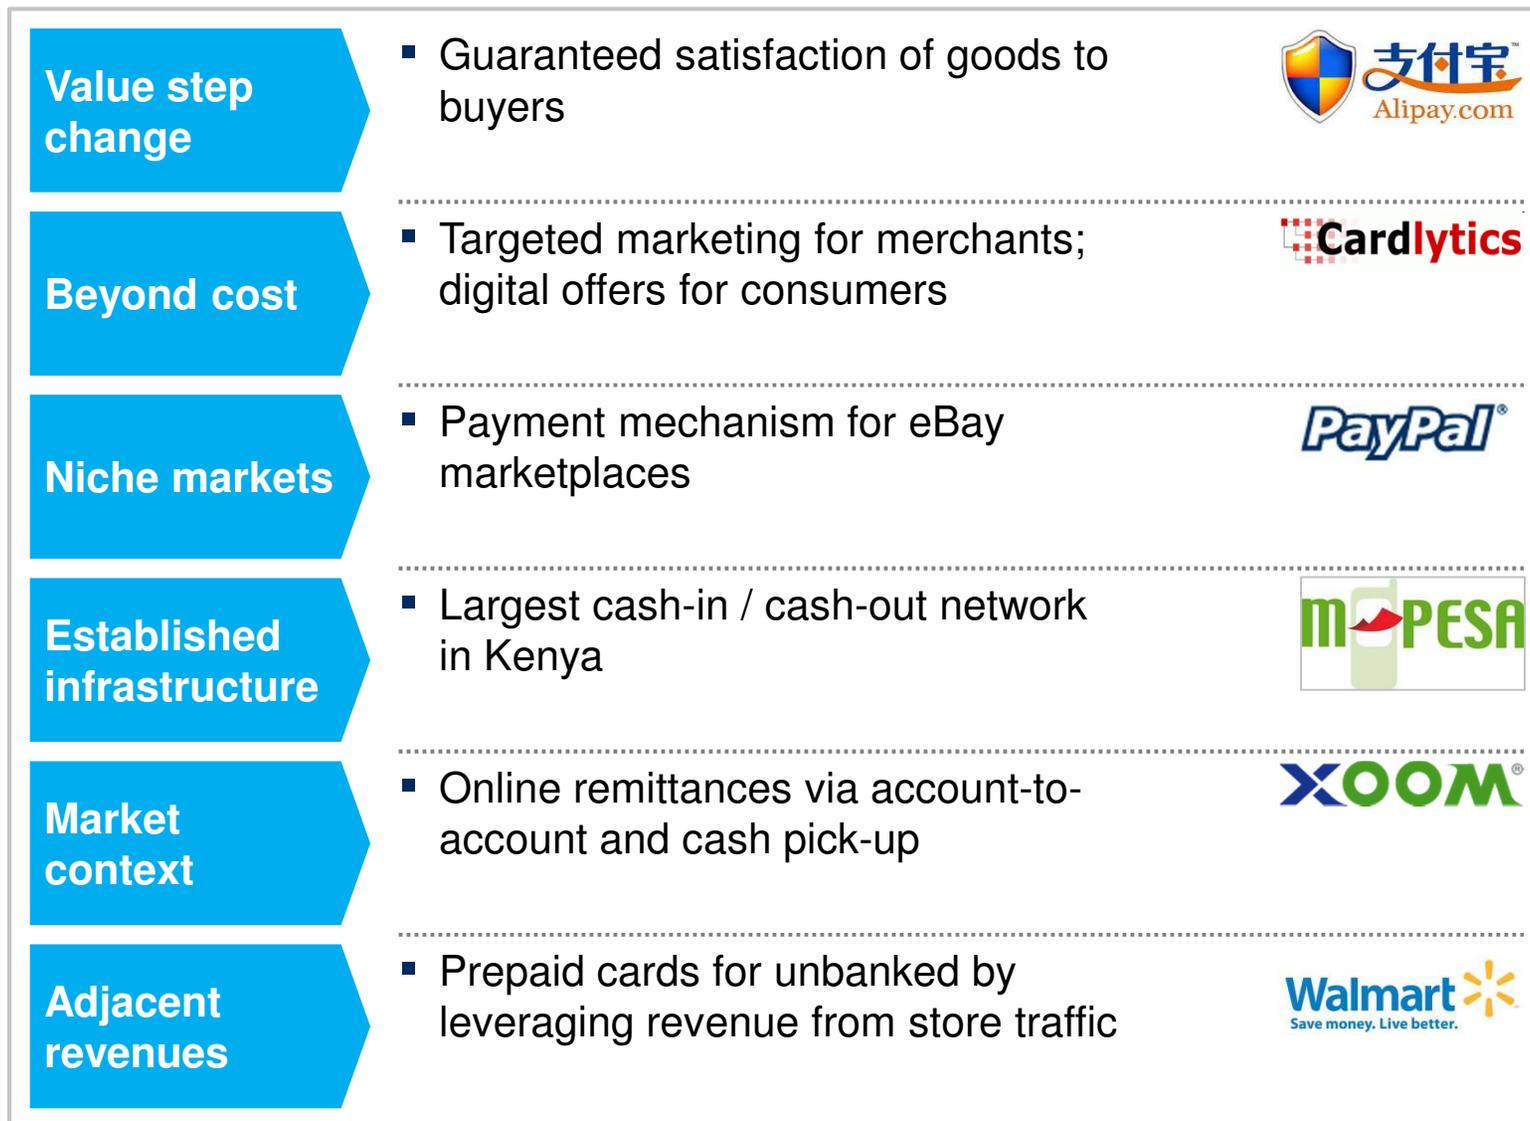

Example

Changing needs

- A** Tender-based loyalty
 - Use transaction level data to drive marketing
 - Level the playing field with online retailers
- B** Dynamic engagement
 - Insert game-play to make shopping more engaging
- C** Lead generation
 - Partner with social networks to generate leads
 - Minimize "showrooming" effect through real-time in-store offers
- D** Virtual shopping
 - Enhance shopping experience through virtual stores
- E** Mobile POS
 - Improve in-store shopping experience by enabling self checkout or mobile POS

Broader innovations in commerce likely to influence nature of future payment solutions

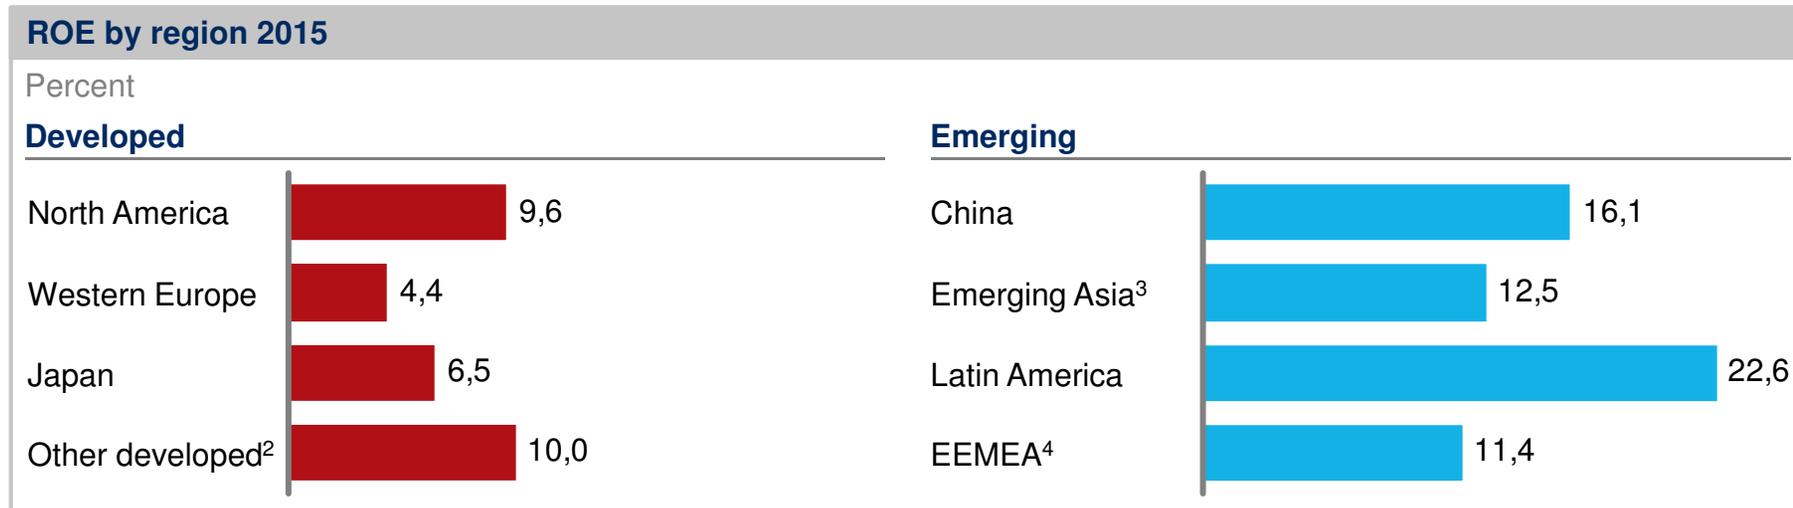

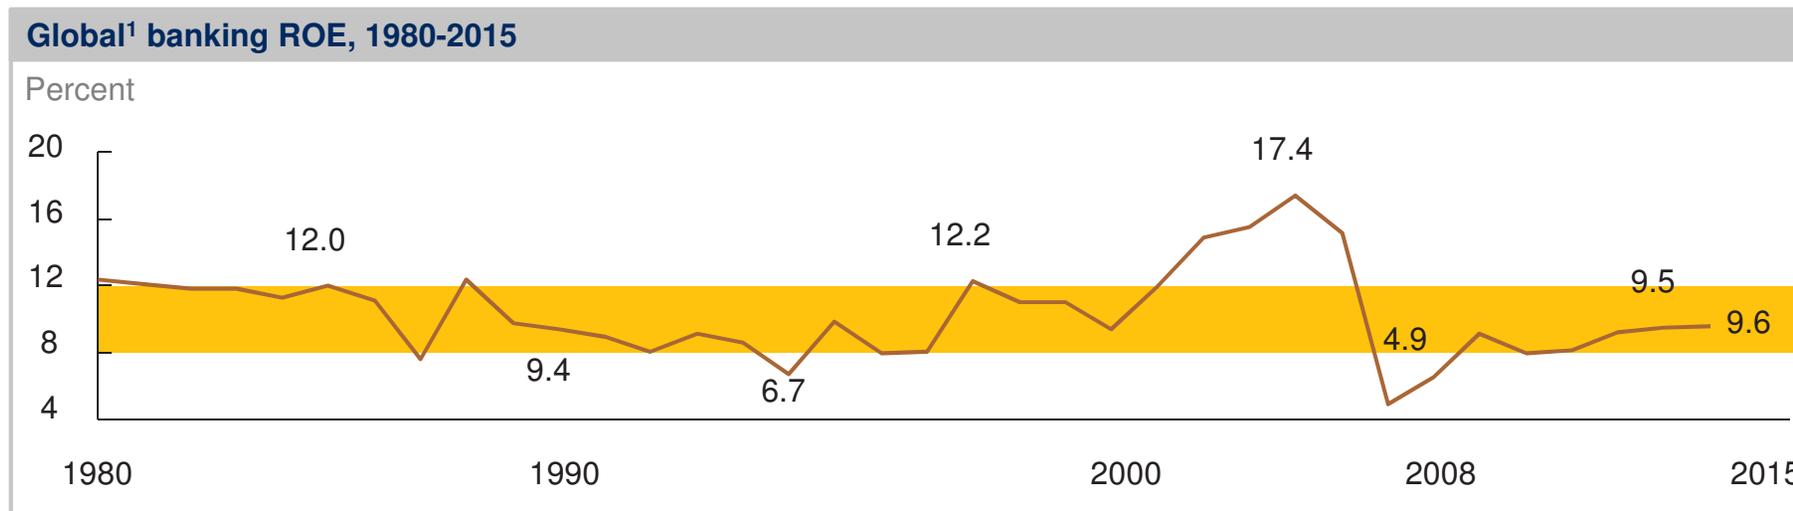

... successful new solutions in payments generally following six “winning” markers

Agenda

- Fintech in Retail Banking: setting the scene
- How Fintechs shape customer expectations: Payments example
- Impact on sector economics

European Banking Sector has not created economic value in 2015

1 Based on a sample of ~1.000 largest banks in terms of assets.

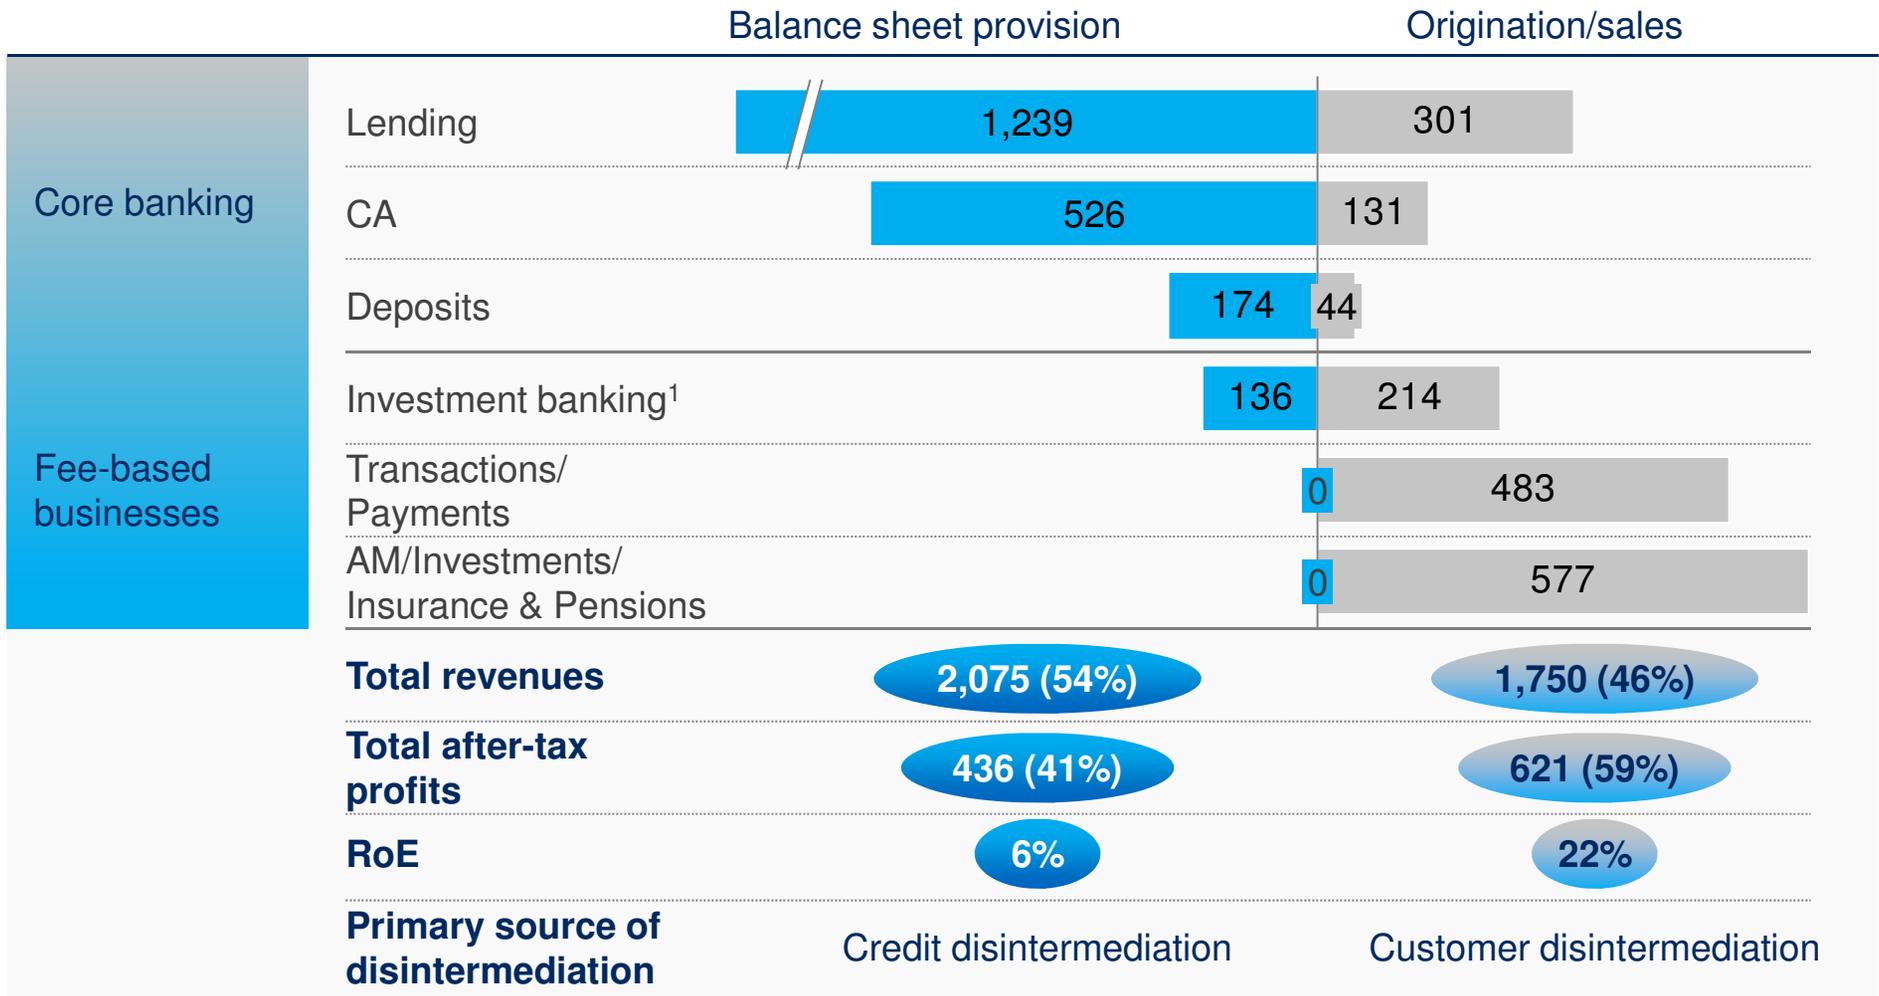

2 Australia, Hong Kong, Israel, Singapore, South Korea, Taiwan.

3 Bangladesh, India, Indonesia, Kazakhstan, Malaysia, New Zealand, Pakistan, Philippines, Sri Lanka, Thailand, Vietnam.

4 Angola, Bahrain, Belarus, Egypt, Hungary, Iran, Jordan, Kuwait, Lebanon, Mauritius, Morocco, Nigeria, Oman, Poland, Qatar, Romania, Russia, Saudi Arabia, Slovenia, South Africa, Togo, Turkey, United Arab Emirates.

Customer disintermediation targets the most profitable activity in banking – origination and sales account for ~60% of global banking profits

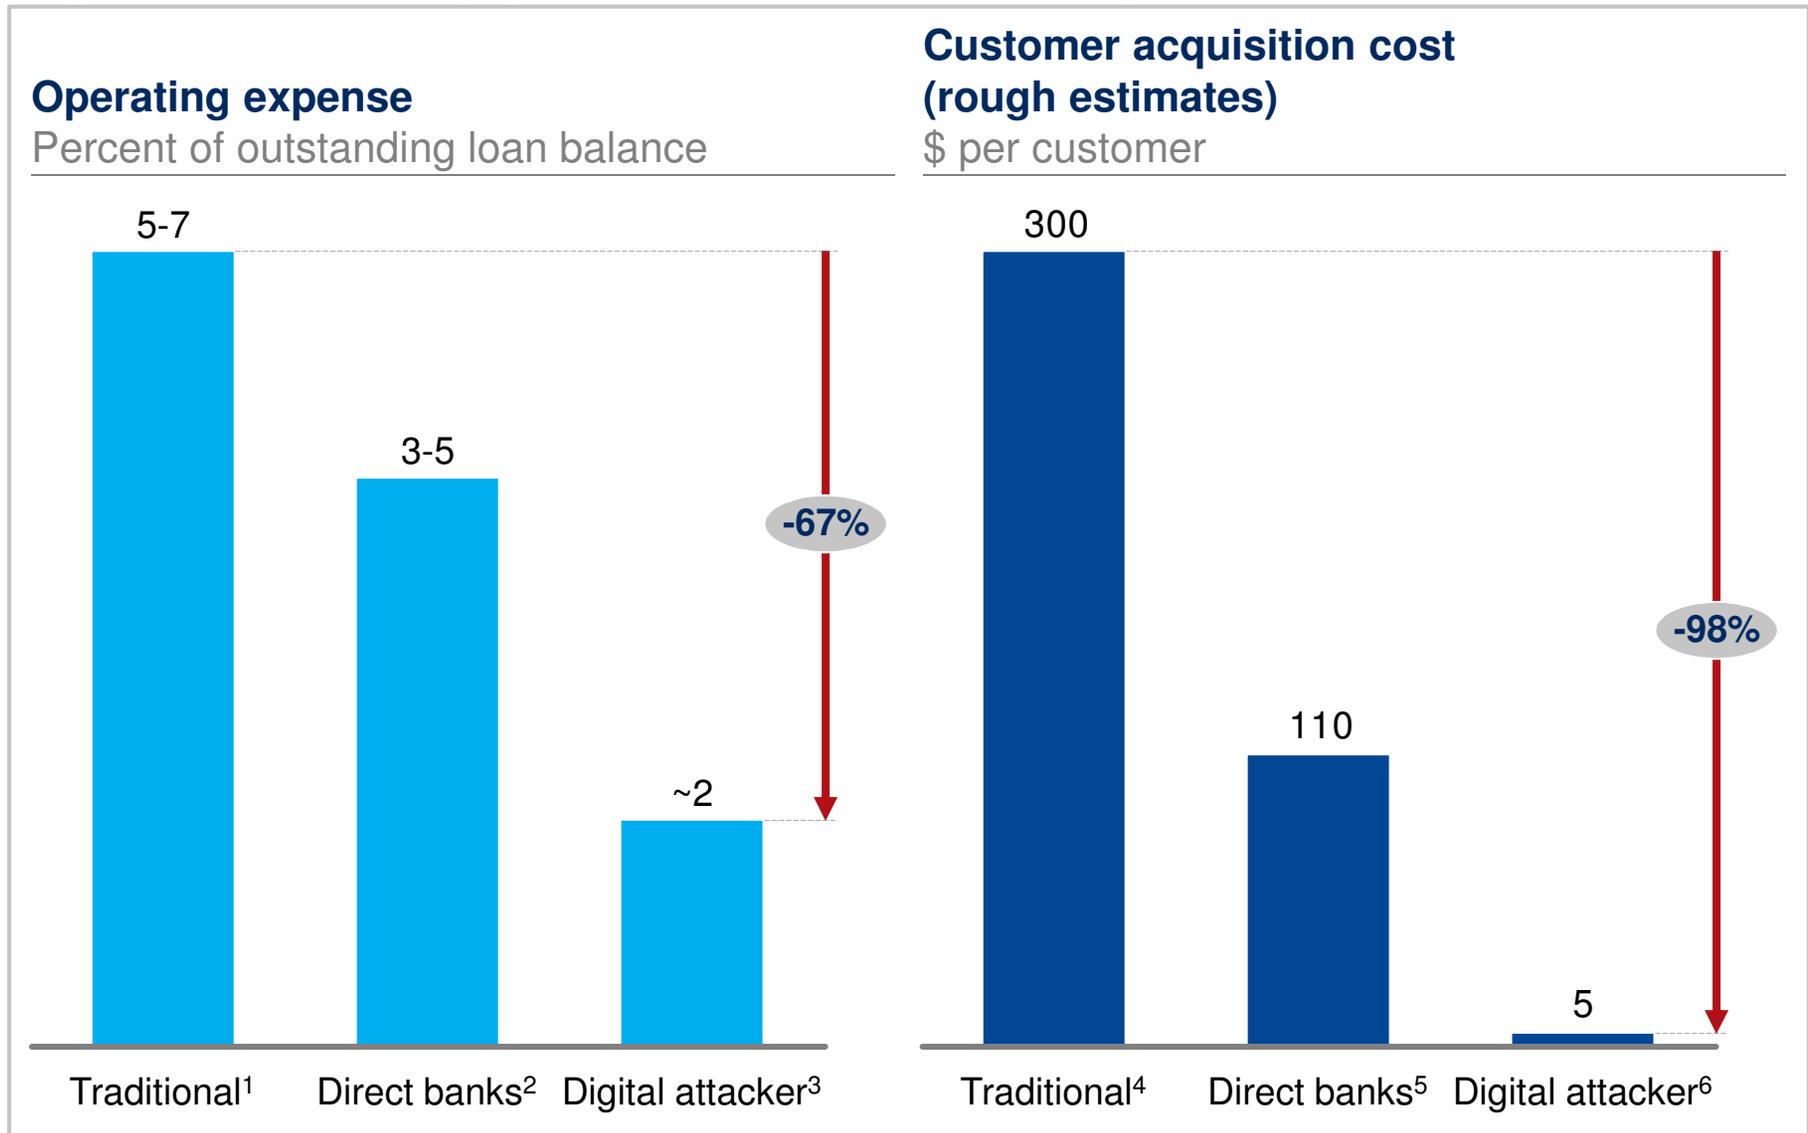

2014 revenue before risk cost, \$ billion

¹ Corporate finance, capital markets, securities services

Digital attackers enjoy substantial cost advantages

↓ Digital bank's cost advantage

1 Traditional banks: based on sample of top 500 banks' data from Reuters.

3 Lending Club First Quarter 2016 Results.

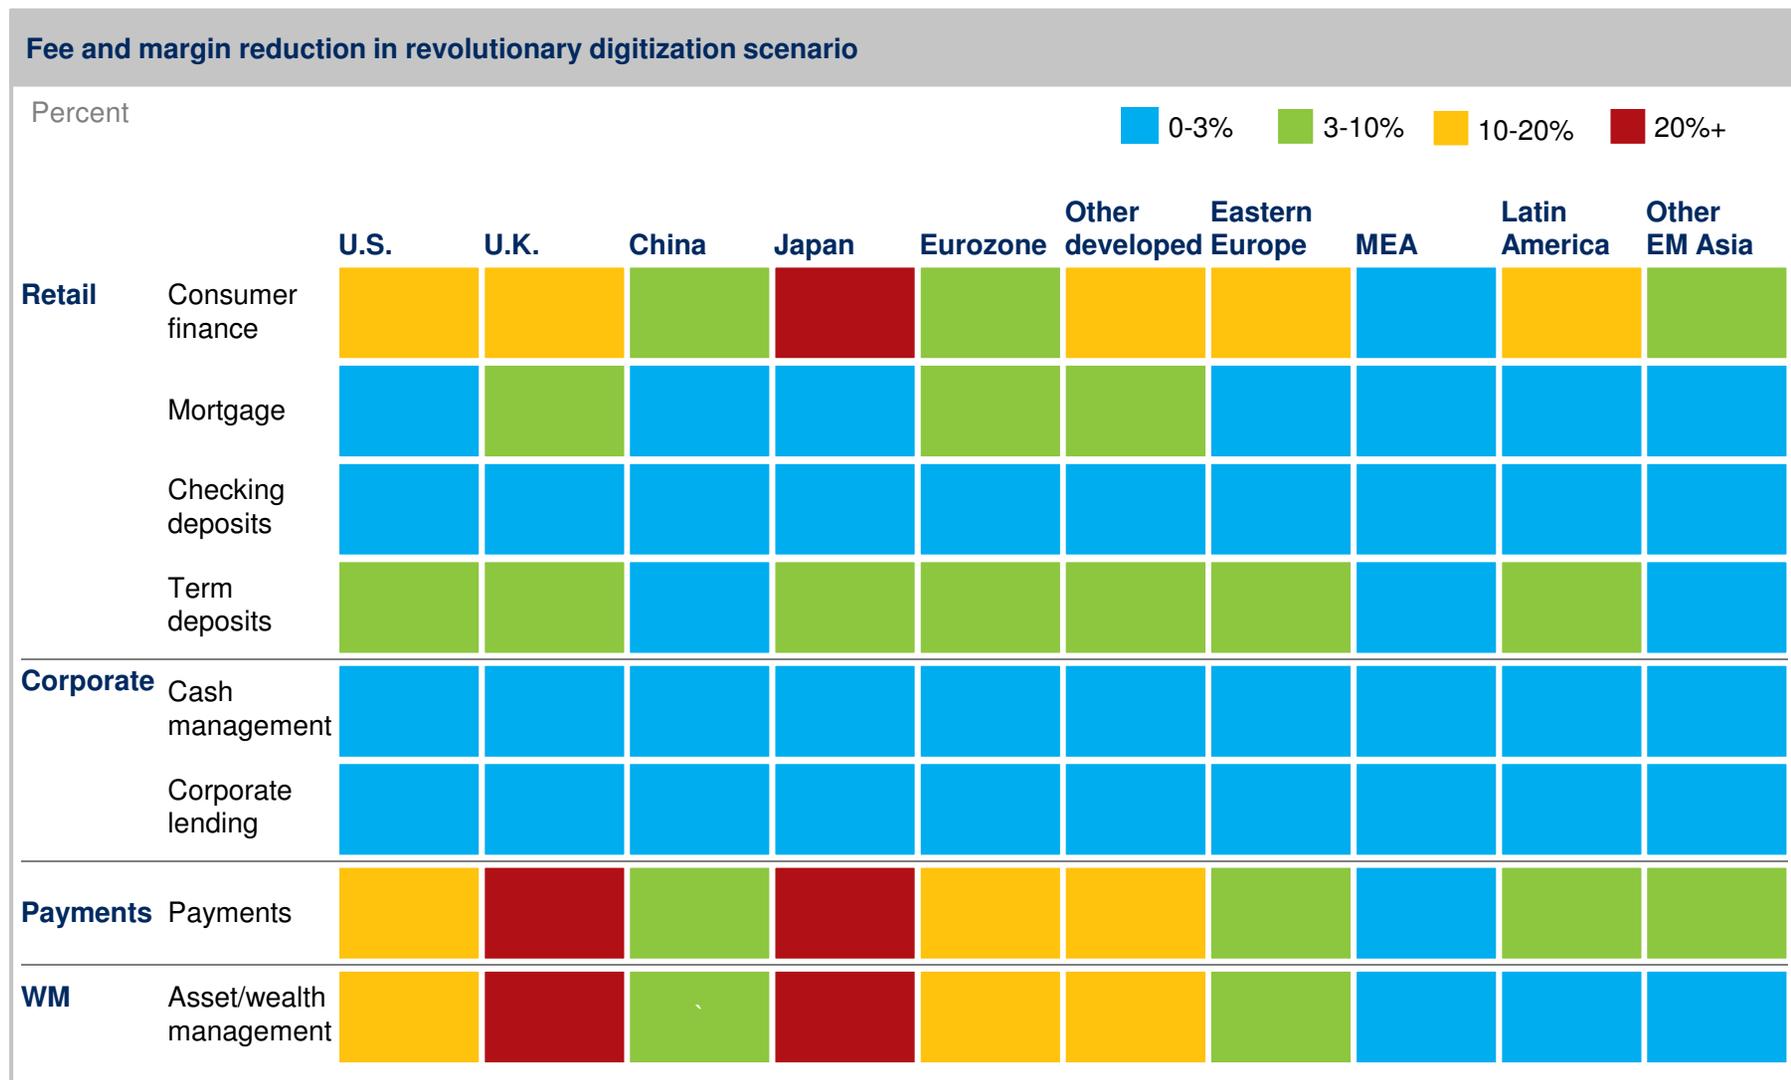

5 Based on expert interviews.

2 Direct banks: ING DiBa, Activo, Checbaca, AirBank, mBank, Zuno (2014).

4 Foundation Capital, 2014; Lending Club based on St. Louis Fed, Federal Reserve.

6 On Deck, company presentation May 2015.

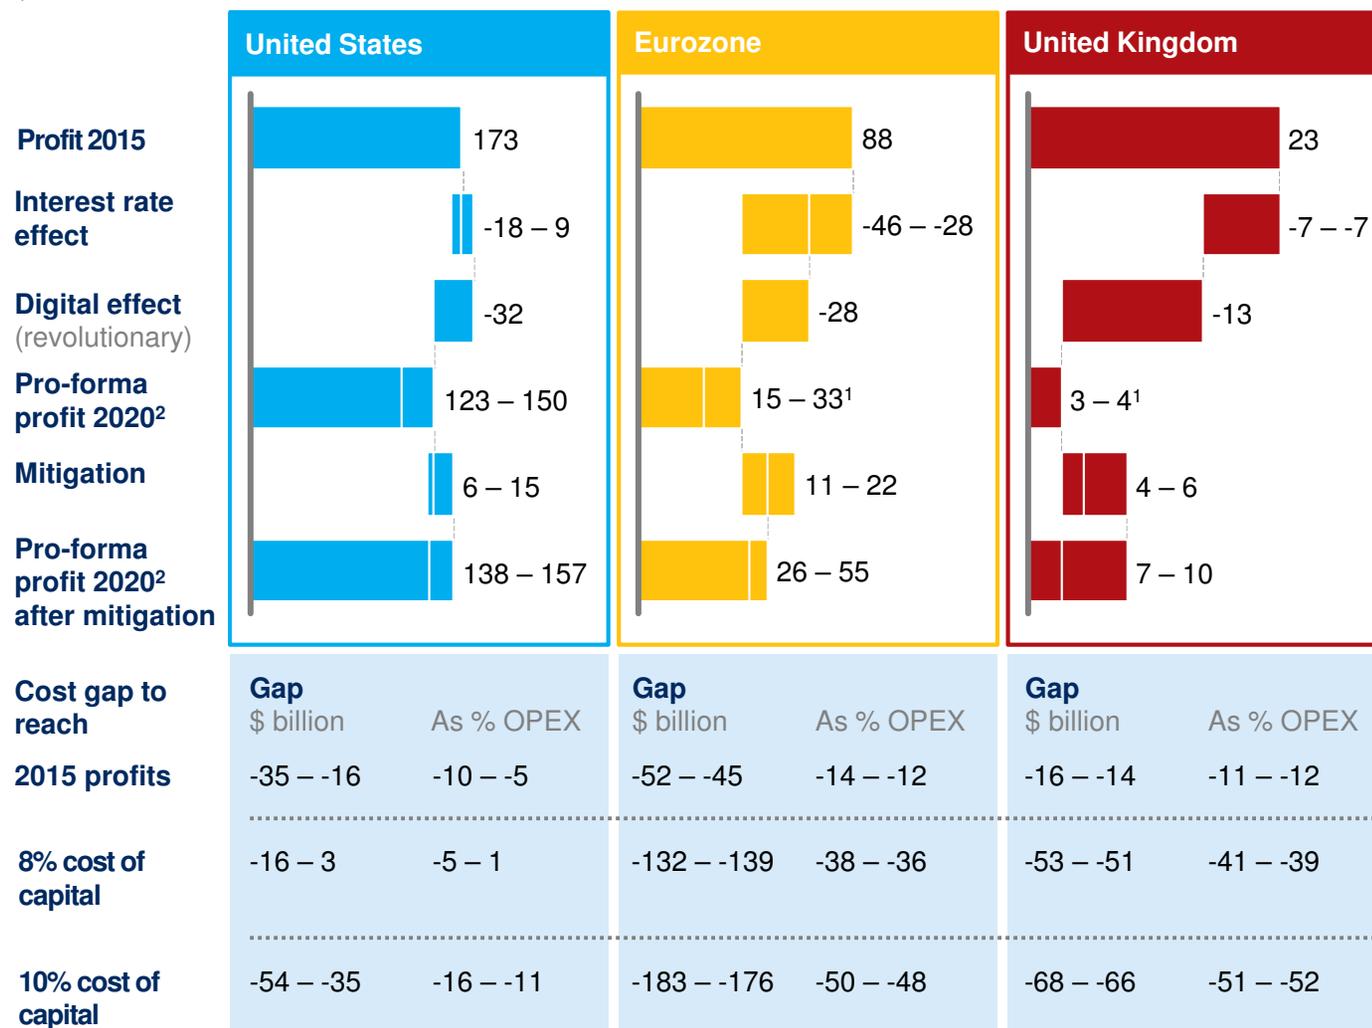

Fee-based businesses likely to experience the largest margin reductions

Potential profits at risk and implied cost gaps in developed market banks

Changes in profitability from 2 secular forces, 2015-20

\$ billion

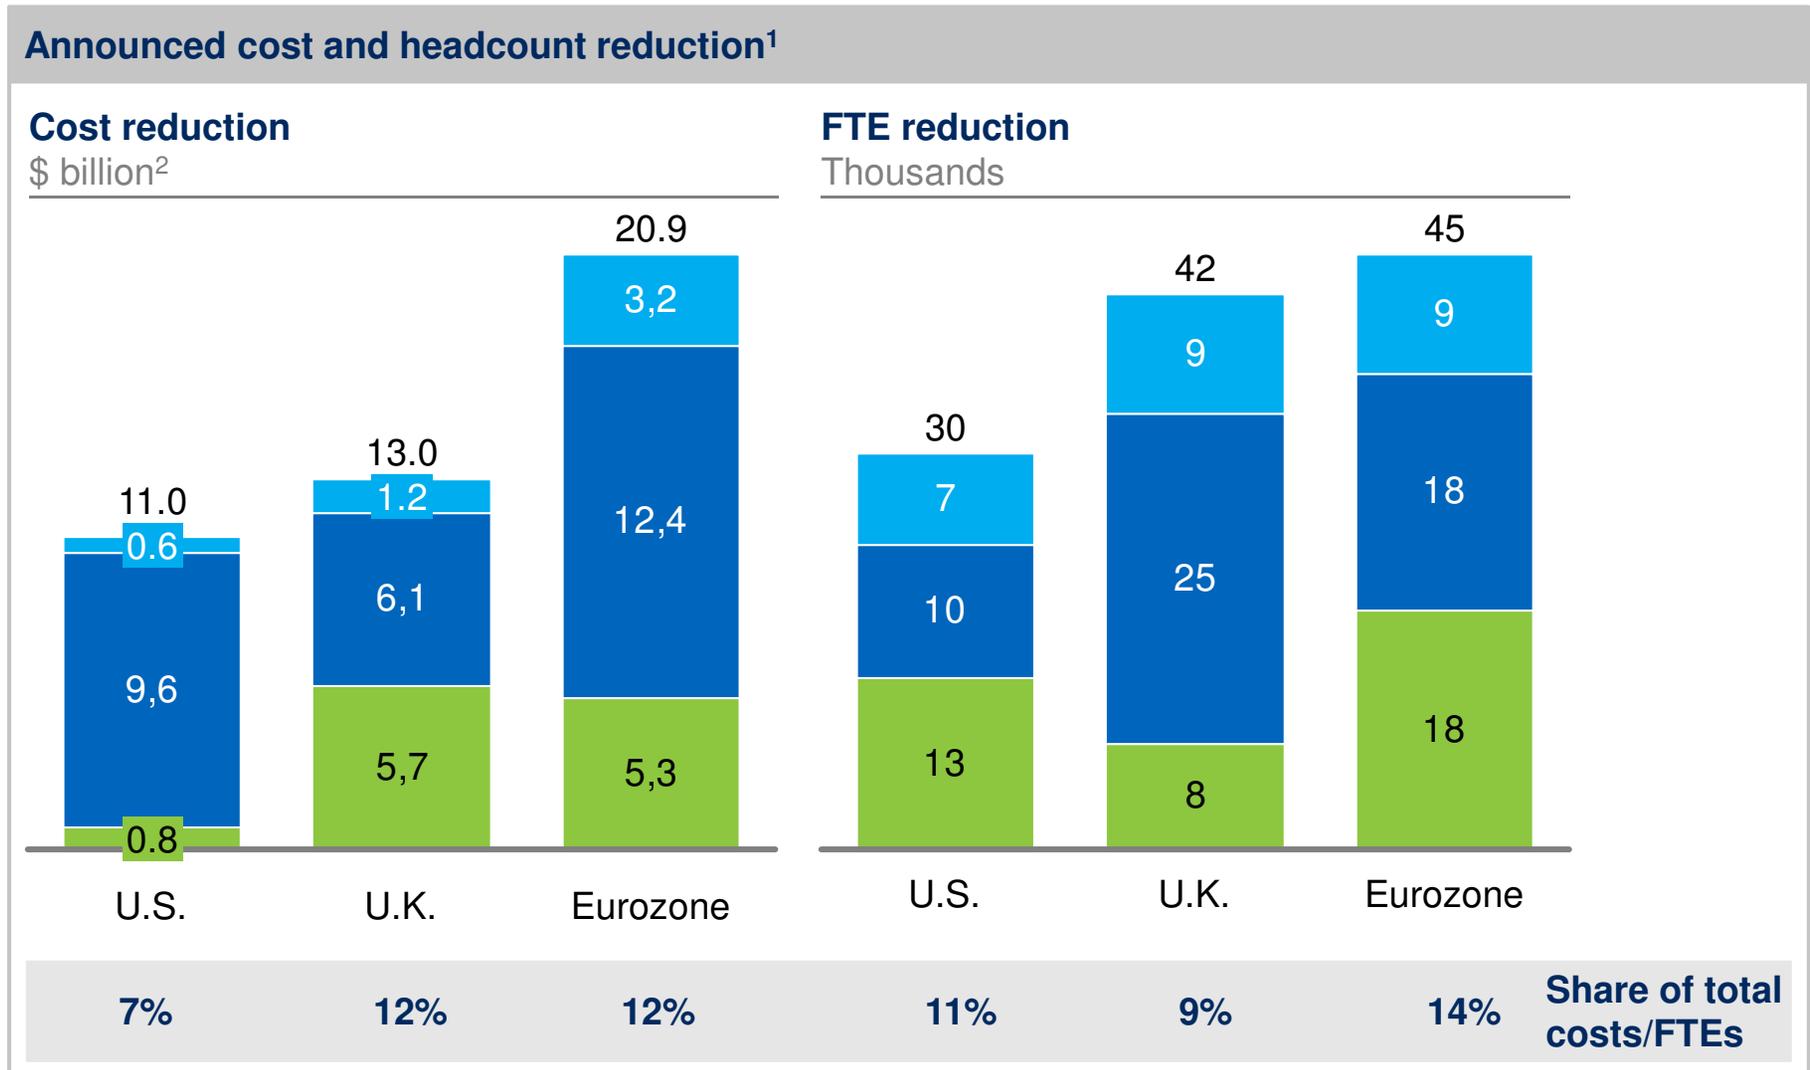

1 In consensus and flat view, including evolution

2 Pro-forma 2020 profit is 2015 profit net of interest-rate and digital effects. Should profits grow strongly, banks will be better able to withstand the negative effects of low interest rates and digitization

Banks are drastically cutting costs and pulling all levers to reach profitability targets

2016 2018 2020

¹ Analysis based on the largest 20 banks per YE assets (US/EU), the top 4 banks according to assets (U.K.).
² GBP, euro and JPY converted to USD at current exchange rate (Oct 2016)

Fintechs and banks are increasingly moving towards working together through partnerships

Banks

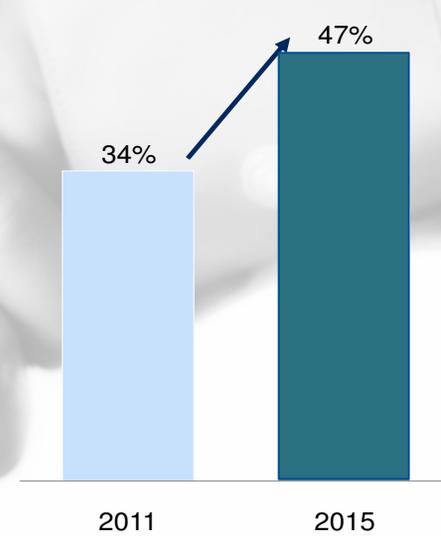

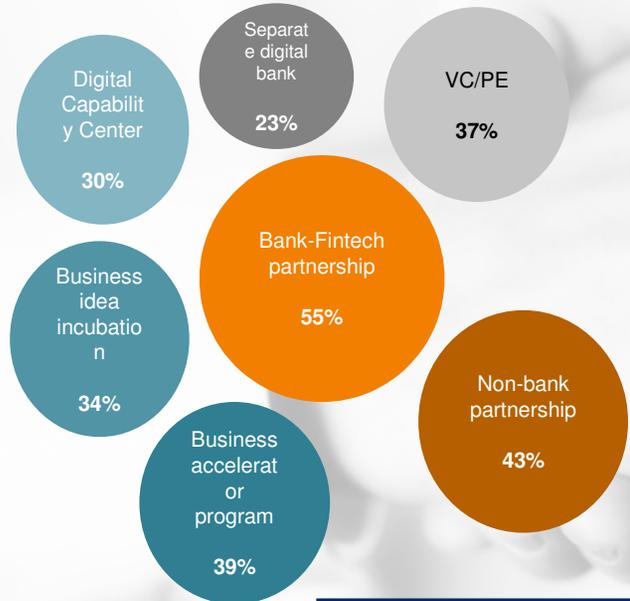

Fintechs

52% of the top 100 banks are already in active partnership with Fintechs...

... While the share of FinTechs having a B2B business model has increased from 34% to 47%

Banks by innovation solution, % of banks¹

Share of FinTechs² with a B2B business model

The share of B2C Fintechs working with banks has also been increasing through customer referrals and other setups

¹ Based on a survey covering the top 100 banks; Percentage includes all banks that have initiatives in a certain category
² Based on a sample of ~ 600 FinTechs included in the database
