

# Resilience and Monetary Policy

Österreichische  
Nationalbank

Vienna, 2023-05-22

# Monetary Policy: Risk and Resilience

- Deterministic thinking (outdated)
- **Risk** management approach
  - probability
  - + impact (disutility)  
of contingency events
- **Resilience** management approach
  - Inflation bounced back (is “anchored”)
  - Avoid traps

# Risk avoidance $\neq$ Resilience

## ■ Risk management

*static*

Variance, Value-at-Risk, CoVaR

Uncertainty/ ambiguity (robustness)

## ■ Resilience management

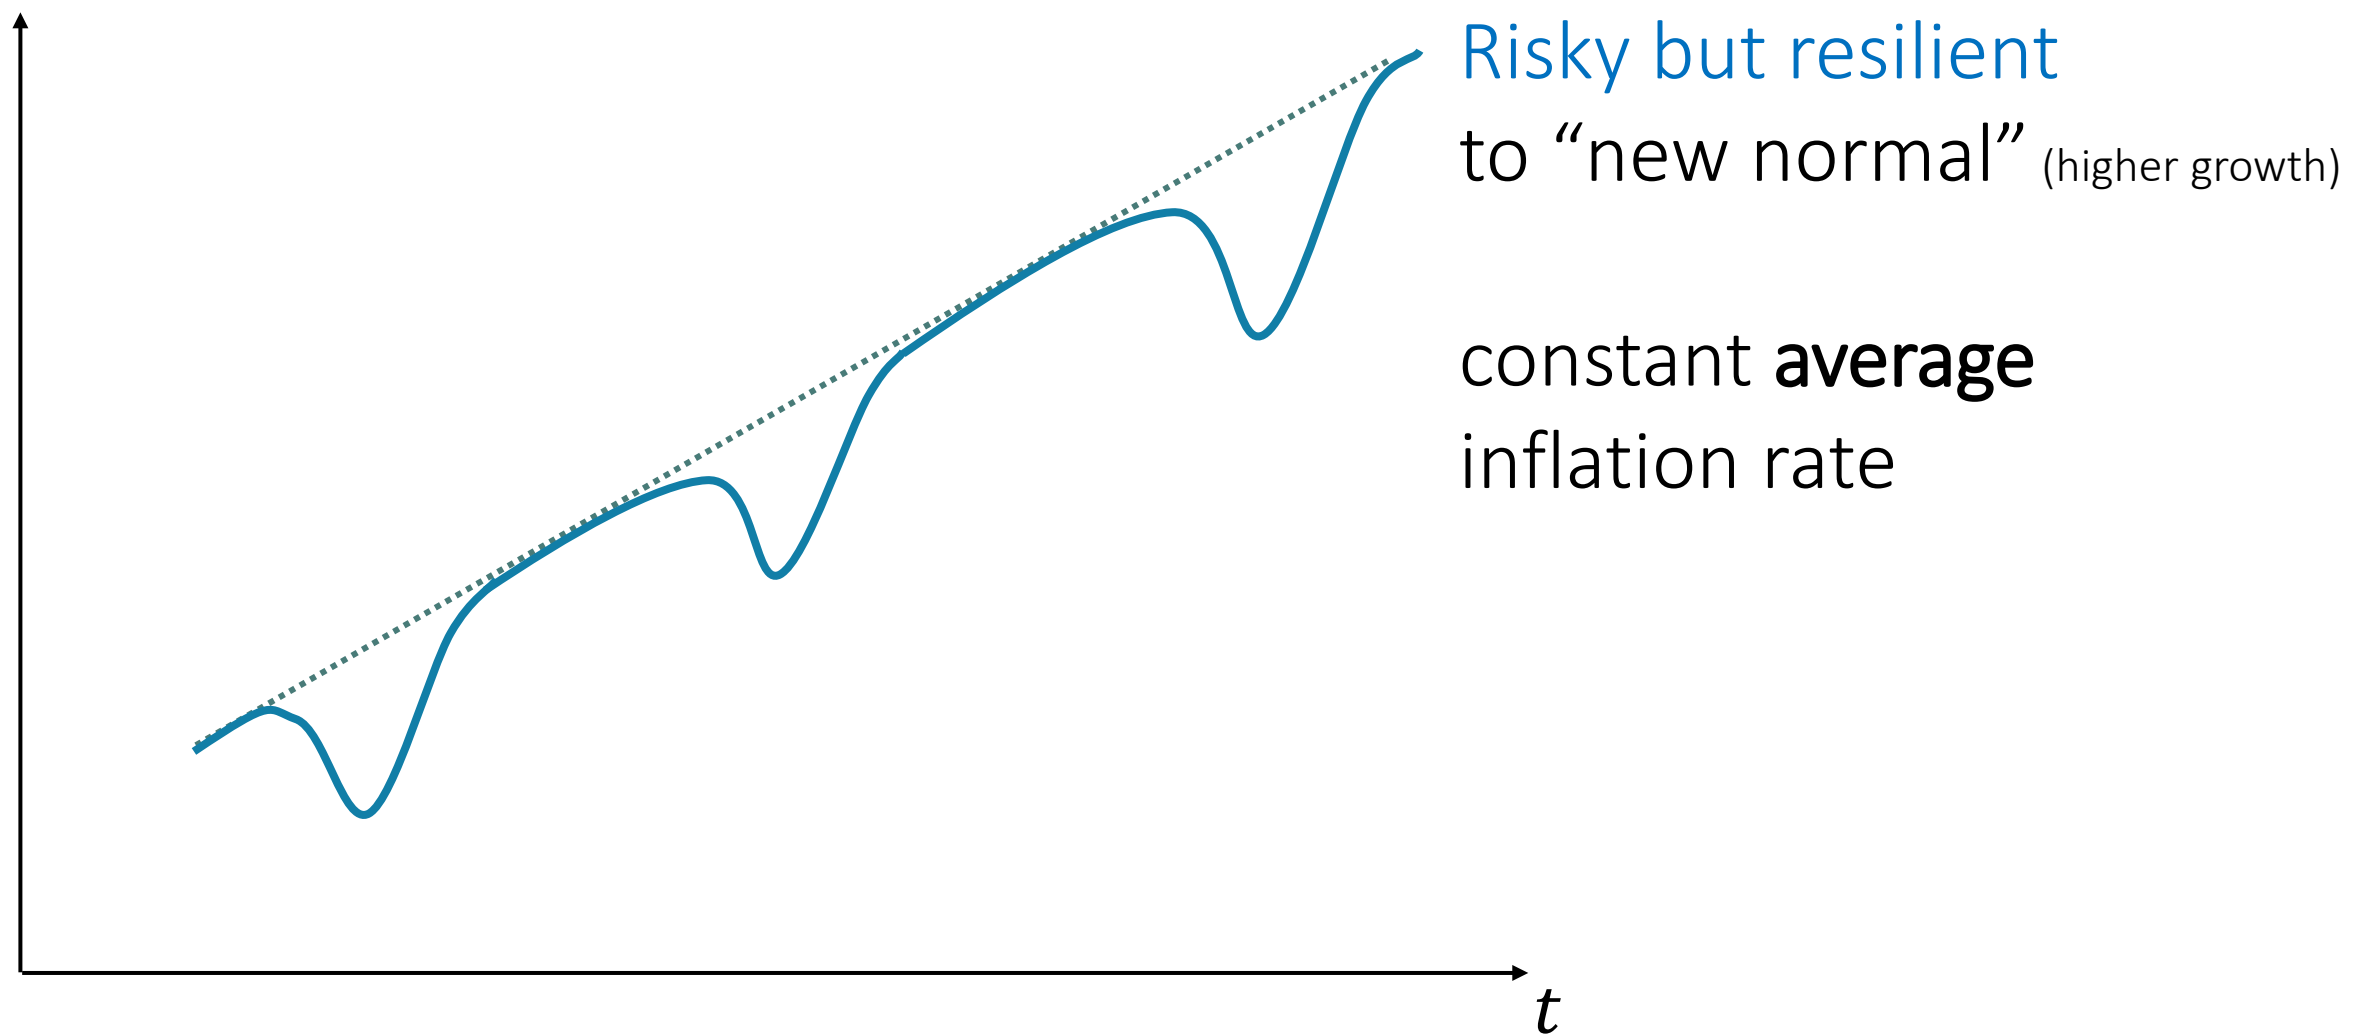

*dynamic*

Mean-reversion, half-life

bounce “back” to new normal

# Resilient Path

# Ability to Rebound Allows to Take Risk/Experiment $\Rightarrow$ **Growth**

- Resilient path vs. risk avoidance path

# Robustness $\neq$ Resilience

## ■ Robustness

- withstand, fault tolerant
- block **most** (also unknown) shocks

the oak

## ■ Robustness barrier

Tipping point

## ■ Volatility Paradox

- Learning to be resilient via small risk exposure (human immune system)

## ■ Redundancies: many

## vs. ■ Resilience

- Impact, but bounce back “to new normal”
- React to shocks

the reed

*“I bend, I bow, but I do not break”*

La Fontaine

fewer, but

**adaptive capacity** (re-deployable)

# ~~Risk~~ Resilience management

- Risk management - *static*
  - Variance, Value-at-Risk, CoVaR
- **Resilience** management – *dynamic*
  - Mean-reversion half-life
    - Diversification
      - over random “bounce back dynamics”
      - Easier to adjust if groundwork is set over many alternatives
  - **Resilience enhancers** adopt and strengthen
  - **Resilience destroyers** avoid and weaken
  - **Uber-Resilience**

# Resilience Enhancers

- Redundancies/buffers
  - Inventories
- Flexibility/liquidity/adaptability via
  - Substitutability = reduce switching costs over time: Le Chatelier Principle
    - Instead of specialized chip use generic chip (lego principle)
    - Infrastructure, digitalization
    - Standardization

- Diversity
  - Idiosyncratic vs. systematic shocks

- Diversification over random “bound back” + readjust more easily if starting point
- Maverick thinking
- Social cohesion
- Learning from smaller previous crises

# Resilience Enhances: Mastering smaller crises

1. Dynamic trade-off: when to use buffers (term structure of resilience)
2. Learning to be resilient via small risk exposure (human immune system)
3. Avoid build-up of imbalances (“push can down the road”)

# Resilience Destroyers

path dependencies, “points of no return”

- Traps
- Feedbacks
- Tipping Points

# Resilience Destroyers

path dependencies, “points of no return”

- Traps
- **Feedbacks**
- Tipping Points

# Resilience Destroyers

path dependencies, “points of no return”

- Traps
- **Feedbacks**
- **Tipping Points**

# Escaping Tipping Points with Resilient Growth Path

- Seemingly riskless part with adverse trend
  - Resilience path is only hope

# Resilience Destroyer: Financial Crises after Bubbles

- Japanese GDP
  - Lack of resilience after financial crisis, resilience after Fukushima

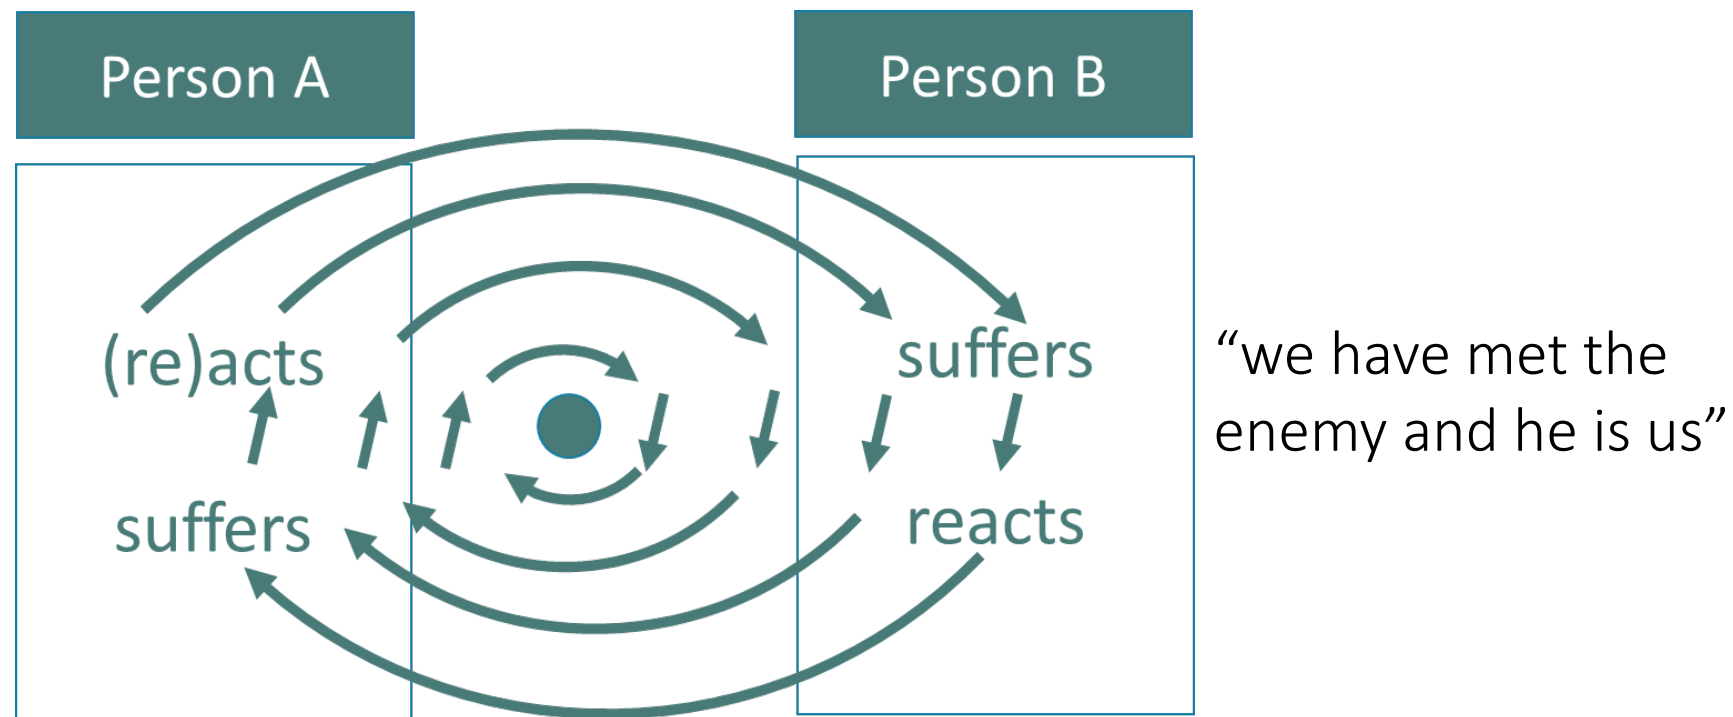

# Resilience: Individual, System, Society

# Resilience: Individual, System, Society

- **Individual:** Personal wellbeing, mental health
- **System:** Networks: electric grid, interbank market, GVC  
Systemic risk due to spillover, domino effects
  - *Feedbacks: Externalities* and endogenous *responses*

“Feedback Externalities”

General Equilibrium Perspective

# Resilience: Individual, System, Society

- **Individual:** Personal wellbeing, mental health
- **System:** Networks: electric grid, interbank market, GVC  
Systemic risk due to spillover, domino effects  
subsystems do not need to be resilient if replaced  
(relative prices can change forever)

Poly-centrality

# Resilience: Individual, System, Society

- **Individual:** Personal wellbeing, mental health
- **System:** Networks: electric grid, interbank market, GVC  
Systemic risk due to spillover, domino effects (CoVaR)
- **Society:** Interaction among humans
  - Selection is problematic: *inclusions vs. replacing*
  - Human actions are driven by expectations

# Resilience and Speed of Change

- Transition phases
- Speed of shocks
  - **“Slow” shock** - sequence of small shocks
  - **Rapid Shock/Jump**
    - Reaction time is too slow
- Reaction time
  - Reaction is leaning against shock ⇒ shorter is better
  - Reaction is amplifying (feedback loops) ⇒ longer is better

# Inflation and Resilience

Chapter 9

# 1. Power of Monetary Policy → Resilience

- Bounce back after a shock via monetary stimulus
- Depends on strength of **inflation anchor**
  - Credibility
  - Resilience barrier: rubber band breaks/snaps
- Higher order **beliefs coordination** (convention, common knowledge (David Lewis))
  - *Uncertainty* what others' belief (about others' beliefs ...)
  - *Disagreement*
  - *Opaqueness whether wage increase is compensation for*
    - *past price increase*
    - *expected future price increase*
- Strengthening the inflation anchor:
  - **Focal point** on anchor
  - **+ no other focal point:** creates confusion/uncertainty about alternative beliefs
- Re-anchoring at 3%
  - How to create common knowledge at different level?

# Taming Inflation Now or Later?

- Monetary policy acts with lags
  - Less pronounced than earlier
- Reveals central bank's "true type" (of anti-inflation commitment)
- De-anchoring of expectations – loss of focal point (resilience barrier)
  - Costs depend on expectations formation
    - Adaptive
    - Extrapolative
    - Rational
  - Expectations confusion/disagreement
  - Uncertainty/risk creation
- Policy Lesson: Narrative is key
  - Narrative not only for failure – danger of a blame game
  - "Clear Guidance Narrative" – going forward

# Anchor, Inflation Expectations, CB Credibility/Reputation

- Inflation predictability ↓ but MoPo lag ⇒ “behind the curve”
- Mean reversion/inflation anchor implicitly assumed (VAR, stationary DSGE)
  - ⇒ transitory bias

Lesson: More responsiveness to data  
(higher Taylor coefficient)  
preserve inflation anchor

- “Data-driven MoPo” is forward guidance in disguise

## 2. Trap thinking

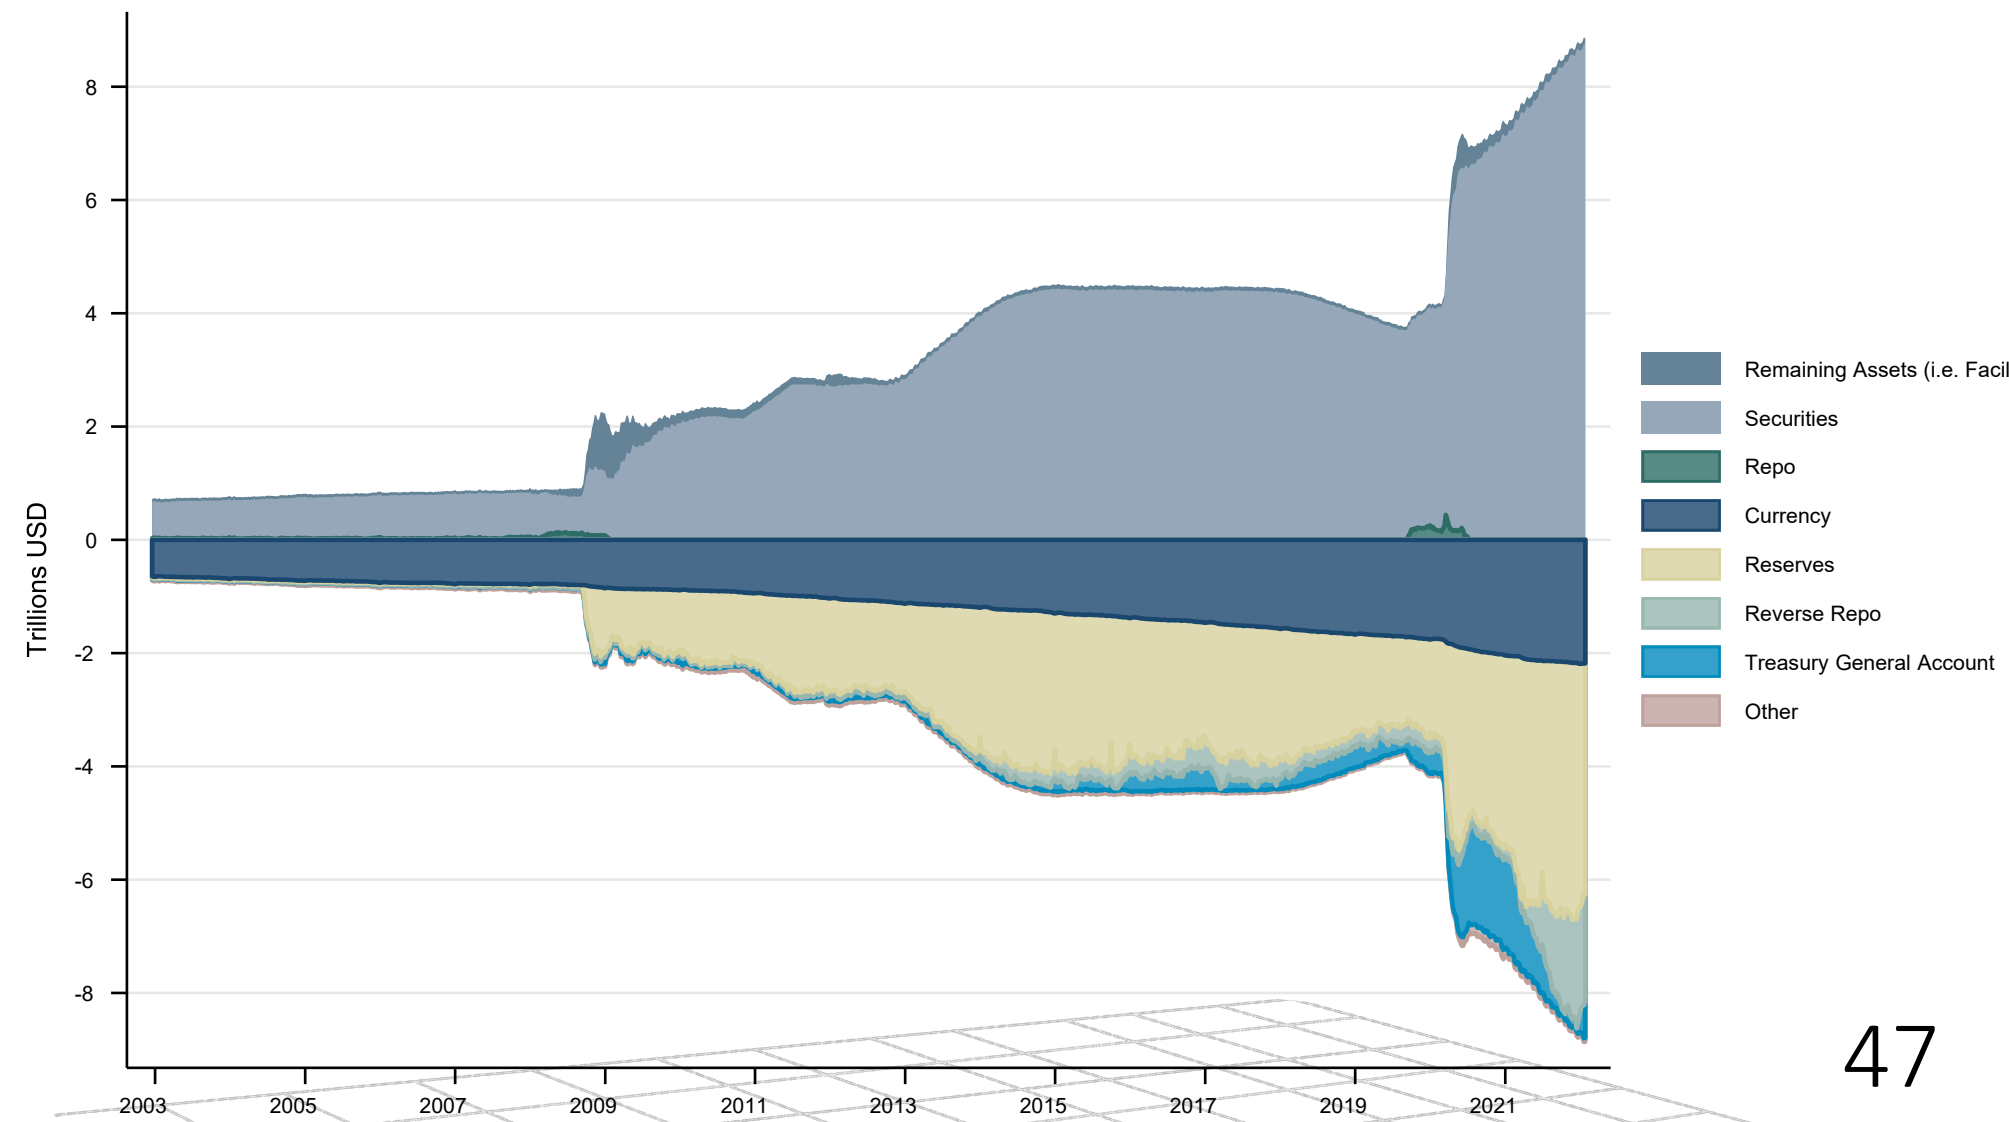

- Trap = “no bouncing back” = no resilience
- Avoiding traps requires ex-ante thinking
- How to avoid “**financial dominance trap**”?
  - **Macro-prudential** regulation
    - Ensure that financial sector does not constrain monetary policy room
- How to avoid “**fiscal dominance trap**”?
  - Central Bank **Independence**
  - Communication and backing by general public
    - Political pressure

## 2a. Monetary vs. Financial Dominance

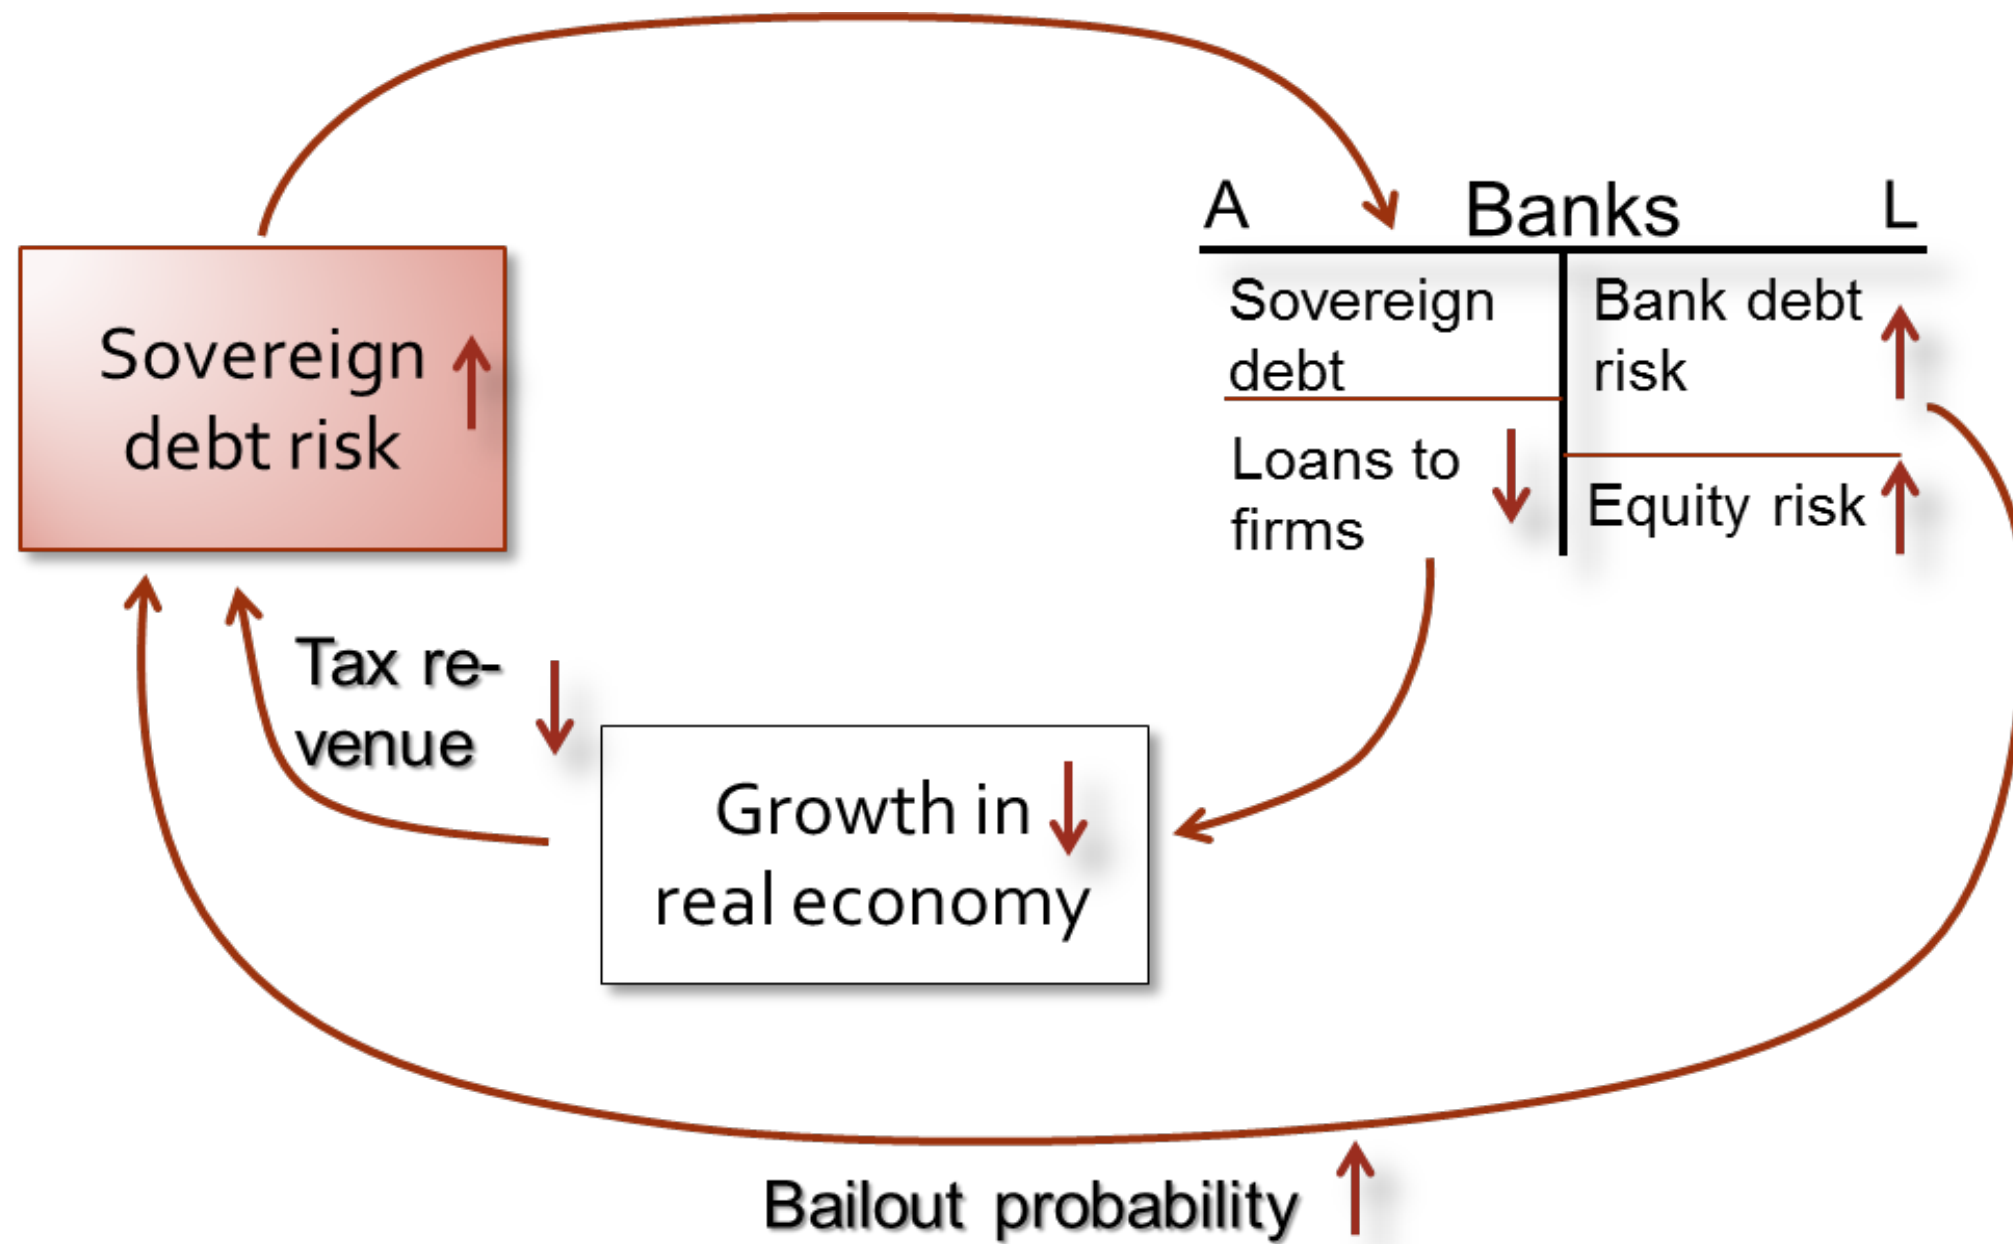

- Low inflation environment: **concurrency** btw price and financial stability
  - Monetary loosening boosts demand and financial stability
  - “Whatever it takes” approach is feasible
- High inflation environment: **trade-off**
  - Price vs. financial stability
  - Expect less intervention
    - ⇒ higher inflation expectations
- CB distorted asset price signals
  - Short vs. pro-longed intervention

# 2a. Monetary vs. Financial Dominance

- Doom/Diabolic Loop

Risk-weights

## 2b. Monetary-Fiscal Interaction

- Fiscal policy impacts on inflation (demand/FTPL)
- Monetary tightening has much large fiscal implications
  - Due to high debt level

➔ Central Bank-Government tensions/political pressure

## 2b. Monetary vs. Fiscal Dominance – “Game of Chicken”

- Central Bank Independence
  - Legal, international treaty
  - Capitalization of CB’s balance sheet
    - Interest rate payments on reserves to private banks
      - Loss on long-dated assets due to QE
      - CB funding cost has doubled (BIS bulletin)
    - Headline risk
- Monetary Dominance & Sovereign debt restructuring costs
  - Ultimate subgame as shifter of bargaining power in game of chicken
- Monetary Dominance and CB communication
  - Narrative + blame game

Lessons

Fiscal Implications

# 2b. Fiscal Inflation Link

# Policies in a High Stag-inflationary Environment

## ■ Supply chain disruptions

- Energy – elasticities of substitutions

(micro vs. macro, ST vs. LT)

- Food shortages (starvation)

- Cyber attacks

- Covid outbreak in China (vaccine)

Expand supply

- Energy transition
- EU agricultural policy
- Share mRNA vaccines

## ■ Demand/investment boost

- Rearmament

- Green transition

Estimate increase in  $r^*$   
⇒ instability

Precautionary savings

## ■ Redistribution: oil importers to oil exporters (windfall gains)

Petro dollar recycling  
(analog of 1970s Kissinger idea  
to create a “buy-in”)

# Changes and Challenges

## ■ *What's new?*

1. High **gov. debt level**,  
Fiscal policy impacts inflation
2. High **private debt level + inflation**  
High asset prices, depressed risk premia
3. Limited inflation **predictability**
4. **Polycrisis**
  - Supply/ demand, idio/systematic risk, temporary ...
5. **Transition phase** due to Structural Changes
  - Green transition, WfH, De-globalization, Demographics
  - Digital Money/ CBDC etc.

## *Implications for Central Banks*

### **Monetary-Fiscal Interaction**

- from coexistence to rivalry/blame game
- Central Bank independence

### **Monetary-Financial Stability Interaction**

- from congruence to trade-off
  - Demand management vs. Fin stability

### **MoPo lags and behind the curve**

### **Humbleness of Central Banks**

- Fallacy to “look-through” supply shocks

### **$r^*$ and risk premium transition**

# Structural Changes and their Transitions

- MoPo is not designed for structural changes, but can accommodate transition
- Impacts  $r^*$  and risk premia

## 1. Green transition

- Reduced investment in dirty technology
- Destruction of dirty and increase in green technology

$r^*$  increases

## 2. Work from home

- More leisure, lower labor income
- Productive loss/gain?

## 3. Demographic change

- More saving followed by more dissaving

## 4. De-globalization

- Efficiency loss (via trade barriers)
- For export nations also negative demand

## 5. Digital Money

# Conclusion: Resilience and Monetary Policy

- **Risk** management approach
  - probability
  - + impact (disutility) of contingency events
- **Resilience** management approach
  - Inflation bounced back
    - Temporary adjustment helps to manage shocks/transition phases
    - Maintaining “inflation anchor” is key (Common knowledge)
  - Avoid traps
    - Financial dominance
    - Fiscal dominance

# Resilience and Global Order

Chapter 9

# Resilience and Global Order

- Geopolitics
  - Geography
  - Zero-sum game
- Global Common and Public Goods
- Global Trade
- Global Finance
- Emerging and Developing countries

# Global Resilience Paradox

- *“Global resilience is undermined by local resilience”*
- Global resilience as global common good
  - Underinvestment in buffers, substitutability, infrastructure
- Local resilience (self-sufficiency)
  - Investment in local resilience lowers investment in global resilience
    - Lower mutual interdependence
  - ... even though global resilience is much more cost-efficient

# Competition of Systems - Fragmentation

- Cold War
  - Capitalism (Neoliberalism) vs. Communism (autocratic)
  
- Now
  - “The West” “autocratic system” (Neodirigrism)
    - Focus on individuals (human rights, ...)
    - Not geographic
      - (Japan, Korea, but not Russia)

# A Personal Conjecture

- In an increasingly complex society
- **Autocratic societies**
  - Seek **robustness** – attractive feature after crises
  - Suppression, minimize movements/disruptions
  - Surveillance
  - Tighten with each crisis ... no rebound
- **Open/democratic society**
  - More **resilient**
  - May appear wobbly when shock hits but internal mechanism allow for rebound
  - Open to mavericks
  - Transparency and more information flow/aggregation

*Good in*

■ *Enforcing rules*

■ *Invented universally  
accepted vaccines*

# Global Trade and Geopolitics

- **Pre: Mutual interdependencies** ⇒ to ensure peace/**international stability**
  - “Just-in-time”, Global Value Chains  
Wandel durch Handel
  - ... but **slowabilization** (in goods only)

# Global Trade and Geopolitics

- **Pre: Mutual interdependencies** ⇒ to ensure peace/**international stability**

- “Just-in-time”, Global Value Chains  
Wandel durch Handel
- ... but **slowabilization** (in goods only)

- **Post: country Resilience** ⇒ less global stability

- “Just-in-case”, autarky, self-reliance

⇒ **higher inflation, real interest**

Stress tests for global value chains

- “Fork in the road”: Fragmentation?

1. Reshoring,
2. Friend-shoring or
3. Multi-sourcing

# Global Finance

- Resilience via **flexible exchange rates**
  - Shock: Devalue currency  $\Rightarrow$  export boom, import shrinks
  - **Mutual resilience insurance** across countries: common good  
... but
- 1930: Beggar-Thy-Neighbor – exploit with intent
- 1944: Bretton-Woods-System
  - Fixed exchange rates      US\$ in the center (US\$ linked to gold)
- 1971: Nixon Shock
  - **Flexible exchange rates**      ERM “snake” for Europe
  - Open current accounts
  - US\$ became more dominant due to eurodollar market
  - Fed Swaplines
- 1998: South-East Asia crisis  $\Rightarrow$  EME reserves accumulation

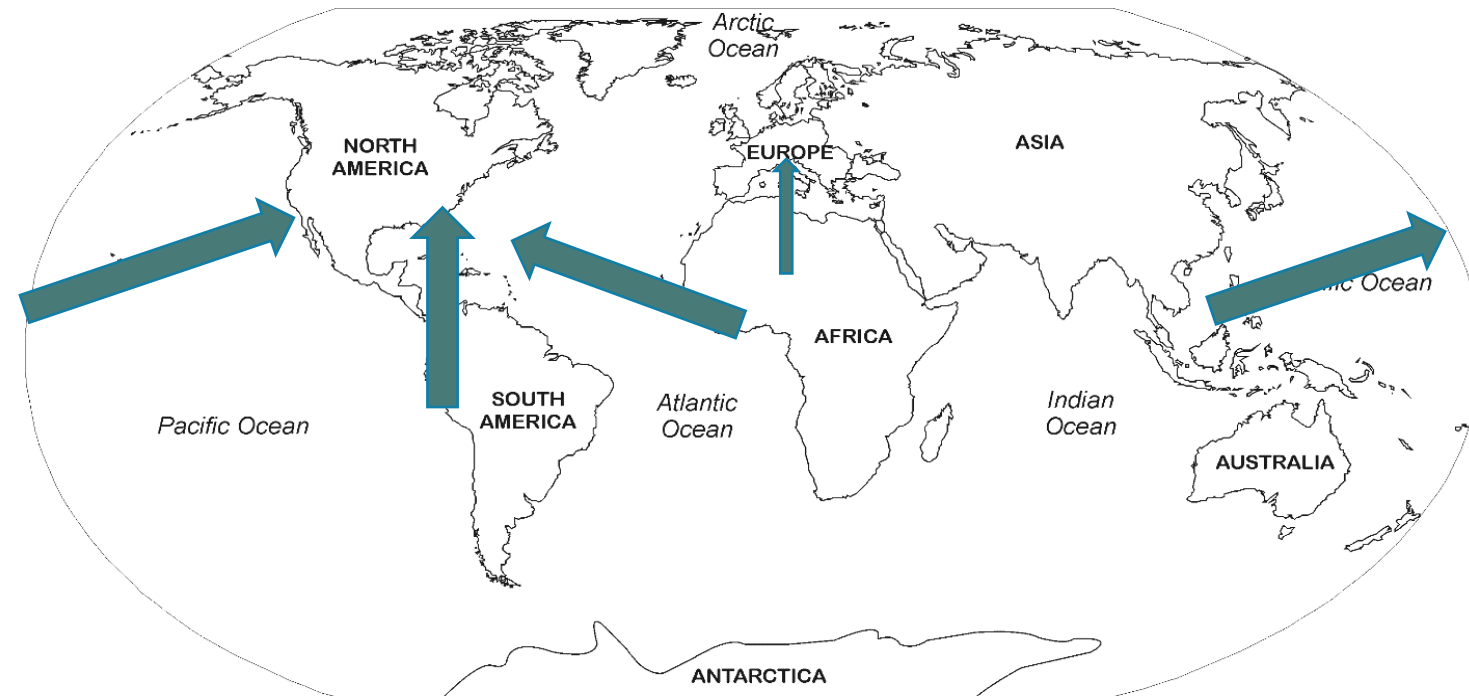

# Global Financial Architecture

- Flight-to-safe asset
  - Tightening of US Monetary Policy
  - Risk-on, Risk-off

# International: Flight to Safety

- Risk-on, Risk-off
- Flight-to-safe asset

- Problem: Safe asset is *asymmetrically supplied* by AE
- Flight-to-safety → cross-border capital flows
- Debt issues at times of global crisis
    - For AE at inflated prices eases conditions
    - For EME at depressed prices worsens conditions
  - *Paradox: “Poor insure rich Paradox”*

# Two Approaches

- Approach 1: “Buffer Approach” *(traditional)*
  - Lean against sudden stop (flight-to-safety) capital outflows
  - Precautionary Reserves
  - IMF liquidity lines
  - Central Banks Swap line arrangements
- Approach 2: “Rechanneling Approach” *(new proposal)*
  - “Global Safe Asset from & for Emerging Economies”

} Official sector

# A Safe Asset for Emerging Economies: Rechannelling Approach

- Address root cause: Safe asset is supplied asymmetrically
- Create globally supplied safe asset for EME via pooling & tranching

*Rechannel:*

Instead of cross-border  
Across asset classes

- Expand ESBies idea for euro area to EME:  
“SBBS (Sovereign-Bond Backed Securities) for the world”  
Euro-nomics group 2011, 2016, 2017

# International: Flight to Safety

- Risk-on, Risk-off → Flight to safe asset
- Channels back some of flight-to-safety capital flows  
fewer cross-border capital flows

# “Digital Currency Areas” - Global Fragmentation *Positive (not normative)*

*Shaped by privacy regulation*

- **US:** **Stablecoins** in US \$
  - programmable tokens of social networks/industry 4.0
  - Challenge: regulating stablecoins, platform **interoperability**
- **Europe:** **Digital Euro** (CBDC)
  - Consumer (not industry 4.0 focused)
  - Challenges:
    - Programmable/Smart contract integration is limited
    - CBDC as legal tender undermines smart contracts further
- **China:** **AliPay** and **WechatPay** + Digital Yuan
  - Consumer (convenience) + medium of exchange focused
- **EMDE:** Domestic CBDCs to fend off **digital dollarization**
  - Challenges: loss of monetary sovereignty and cheap funding

*Rent seeking by  
Stablecoin companies*

**offensive**

**defensive**

# Climate Change Challenge

- Global Public Good with
  - Double-externality: R&D and pollution
  - + network externalities: Chicken-Egg problem (QWERTY)
  - “Climate Clubs”
- De-growth strategy vs. innovation
  - Covid CO2 emission reduction was minimal
- Three-prong strategy
  - Mitigation - electric vehicles
  - Adaptation – high-tech dikes
  - Amelioration – geoengineering
- 2 Reaction to Ukraine war: speed up vs. turn around?

Climate change  
understanding counterfactual  
Resilience strategy is more likely: Let climate change show up

# Inequality: Resilience with Inclusion

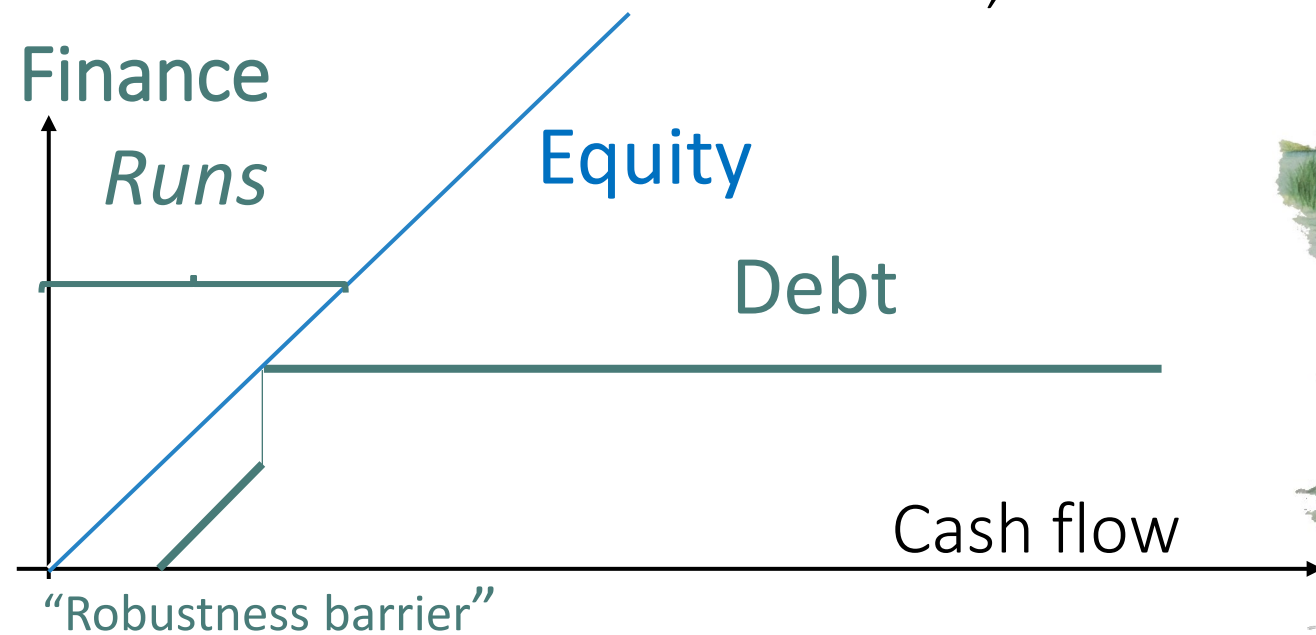

- Income inequality                      static measure
- Wealth inequality
  - Discount rate effects
- Social mobility                      dynamic measure
  - How many generation does it take to move to the top?
  - Stylized Example: 2 groups switching rank repeatedly
  - Elephant curve – The Great Gatsby Curve
- Resilience inequality                      (new concept)
  - Some people bounce back more easily than others  
... and hence can take more risk (earn higher risk premia)
- Insecurity
  - Moving comparative advantage

# Resilience and Policy Implications

- **International Trade: Global value chains**
  - From “just in time” to “just in case” -- stress tests for GVC (resilience lessons from GFC)
- **International Macro-Finance**
  - Flexible exchange rate – Foreign exchange reserves (buffers)  
+ MacroPru (limited \$-debt)
  - Poor insuring the rich: “GloSBies” and Global Role of the US dollar as safe asset
- **Global geopolitics** – cyber warfare
- **Emerging Economies** – poverty and middle-income traps
- **Climate change** – Sustainability = resilience + no adverse trend
- **Macro**
  - Low interest rate  $\Rightarrow$  more fiscal, less monetary resilience

## Finance

# Resilience and Policy Implications

- **International Trade: Global value chains**
  - From “just in time” to “just in case” -- stress tests for GVC (resilience lessons from GFC)
- **International Macro-Finance**
  - Flexible exchange rate – Foreign exchange reserves (buffers)  
+ MacroPru (limited \$-debt)
  - Poor insuring the rich: “GloSBies” and Global Role of the US dollar as safe asset
- **Global geopolitics** – cyber warfare
- **Emerging Economies** – poverty and middle-income traps
- **Climate change** – Sustainability = resilience + no adverse trend
- **Macro**
  - Low interest rate  $\Rightarrow$  more fiscal, less monetary resilience
- **Finance**
  - Efficient debt restructuring -- Capital requirements (buffers)  
(to avoid debt overhang)
  - Distributed Ledger Technology (DLT)
- **Resilience Inequality**  $\Rightarrow$  income and wealth inequality
- **Health:** Vaccines to return to “new normal” (Uber-Resilience) vs. China’s zero-Covid
- **Education:** Foster taking initiatives, general and life-long education, no comparisons to others

**Thank You**

# Finance and Resilience

Chapter 9

# Resilience and the Slope of the Yield Curve

## ■ Resilient path

Resilience and the slope of the yield curve

- Increasing  $\Rightarrow$  resilience ( $\vee$  recessions)
- Flat  $\Rightarrow$  random walk (permanent)

# Resilience: Debt vs. Equity

“robust”/resistant until it breaks through “Robustness barrier”

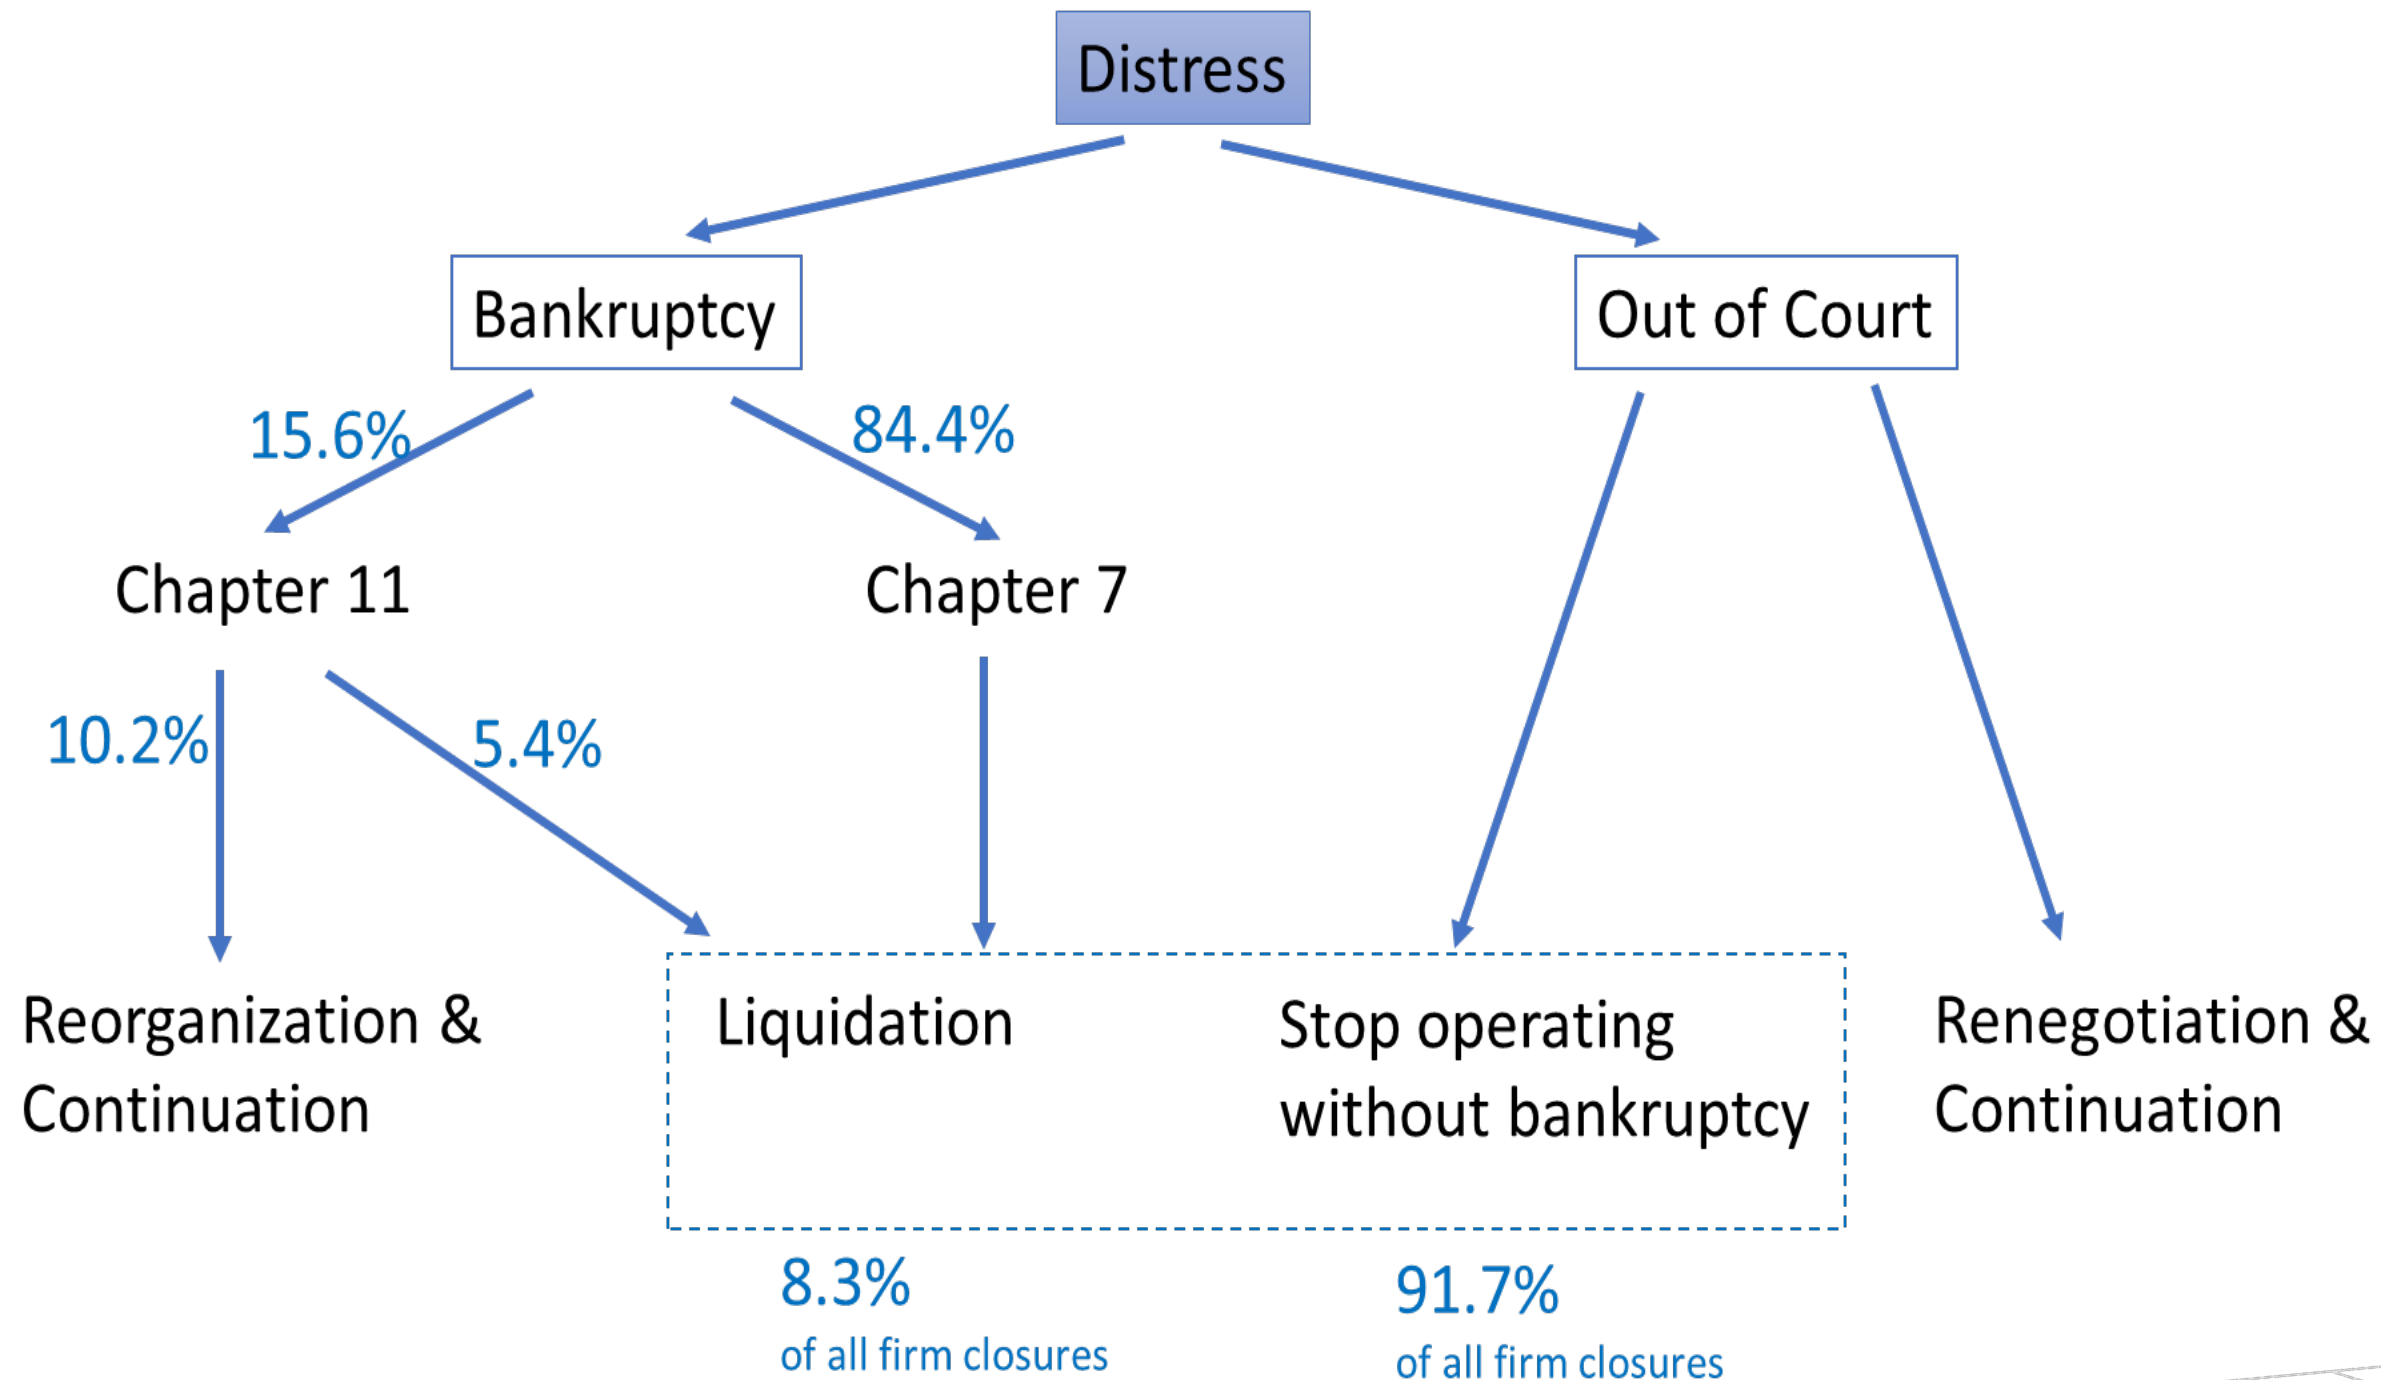

Equity

# Resilience enhancer: Bankruptcy Protection

- Bankruptcy in US:

# Stock Market Resilience - Cross-section

- Resilience = price reversals
  - Long-run Price Reversal: 4 years  
DeBondt and Thaler (1985)
  - Medium-run Momentum: 6 months
  - Very short-run Reversal: daily
- ... more after downside-shocks?
  - Negative **skewness** (asymmetric distribution)  
(of whole market vs. individual stocks)

# “Financial Markets Whipsaw”: Stocks and Corporate Bonds

- March 2020 shivers followed by strong recovery
  - **Stock market** record heights – IPOs like during NASDAQ bubble

*Record **IPOs** due to SPACs*

# “Financial Markets Whipsaw”: Stocks and Corporate Bonds

- March 2020 shivers followed by strong recovery
  - **Stock market** record heights – IPOs like during NASDAQ bubble
  - **Corporate bond market** CB: Tail risk removal

*Record corporate bond issuance*

Large corporation paid back bank loans (from drawn credit lines)  
Freed up risk-bearing bank capital by banks for lending to SMEs

# “Financial Markets Whipsaw”: US Treasury

- March 2020 shivers followed by strong recovery

- Gov. bond market shivers**

**CB: Market maker of last resort** to preserve safe asset status

- What’s a safe asset?

Precautionary savings: Asset Price =  $E[PV(\text{cash flows})] + E[PV(\text{service flows})]$

- Good friend:

can sell at high price and low-bid ask spread in crisis times

# Resilience and Policy Implications

- **International Trade: Global value chains**
  - From “just in time” to “just in case” -- stress tests for GVC (resilience lessons from GFC)
- **International Macro-Finance**
  - Flexible exchange rate – Foreign exchange reserves (buffers)  
+ MacroPru (limited \$-debt)
  - Poor insuring the rich: “GloSBies” and Global Role of the US dollar as safe asset
- **Global geopolitics** – cyber warfare
- **Emerging Economies** – poverty and middle-income traps
- **Climate change** – Sustainability = resilience + no adverse trend
- **Macro**
  - Low interest rate  $\Rightarrow$  more fiscal, less monetary resilience
- **Finance**
  - Efficient debt restructuring -- Capital requirements (buffers)  
(to avoid debt overhang)
  - Distributed Ledger Technology (DLT)
- **Resilience Inequality**  $\Rightarrow$  income and wealth inequality
- **Health:** Vaccines to return to “new normal” (Uber-Resilience) vs. China’s zero-Covid
- **Education:** Foster taking initiatives, general and life-long education, no comparisons to others

# Outline of Book

- Part I: Society and Resilience
- Part II: 4 Elements of Resilience Management: COVID
- Part III: Macro Resilience
  - Innovation boost vs. Scarring
  - Financial whipsaw
  - Public Debt
  - Inflation whipsaw
- Part IV: Global Resilience
  - EMDE
  - Geopolitics, World order, Global finance, Value chains, Climate

**Thank You**

# Resilience and Policy Implications

- **International Trade: Global value chains**
  - From “just in time” to “just in case” -- stress tests for GVC (resilience lessons from GFC)
- **International Macro-Finance**
  - Flexible exchange rate – Foreign exchange reserves (buffers)  
+ MacroPru (limited \$-debt)
  - Poor insuring the rich: “GloSBies” and Global Role of the US dollar as safe asset
- **Global geopolitics** – cyber warfare
- **Emerging Economies** – poverty and middle-income traps
- **Climate change** – Sustainability = resilience + no adverse trend

# 02/24/22 Watershed Moment on Global Economic Order

- **Pre:** mutual interdependencies to ensure peace  
make wars expensive
- **Trade:** Global Value Chains, “just-in-time”  
Trade bring (political) change – “Wandel durch Handel”  
 $\Rightarrow$  low  $\pi$
- **Post:** Resilience: “just-in-case”, autarky, self-reliance
  - More than **slowbalization** (?) - sanctions

# The Future of Globalization (Slowabilization)

- “Slowbalization” (in trade), Deglobalization (in services, technology transfers)

- From **cost minimization** to **Resilience**
  - **Just-in-Time**  $\Rightarrow$  **Just-in-Case**

■ **Cheap**

**Reliable/sustainable**

■ Cheapest supplier/country

3 different suppliers (**multi-sourcing**)  
from 3 different continents

Fragmentation via  
“Friend-shoring”

GVC Stresstests

# 02/24/22 Watershed Moment on Global Economic Order

- **Pre:** mutual interdependencies to ensure peace  
make wars expensive
  - **Trade:** Global Value Chains, “just-in-time”  $\Rightarrow$  low  $\pi$   
Trade bring (political) change – “Wandel durch Handel”
  - **Finance:** Cross-border investments – open capital account  
EM \$-reserve holdings to offset capital outflows  $\Rightarrow$  low  $r$
- **Post: Resilience:**
  - Trade: “just-in-case”, autarky, self-reliance
  - Finance: capital controls, fewer EM \$-reserves  $\Rightarrow$  higher  $\pi, r^*$ 
    - + green transition
    - + Covid shock in China
- Fork in the road”: Reshoring, friend-shoring or multi-sourcing

# Working from Home and city design

- Working from home: shift – stigma removal
- Donut effect due to Covid for metropolitan areas
  - City centers are struggling, suburbs thriving

- Smart cities
  - Digitalization – New form of hygiene management (like sewage in 19<sup>th</sup> century)

# International Economics and Resilience

Chapters 13, 14

# Global Resilience

- Emerging Economies
  - Poverty trap
    - Resilience to bounce back after a shock
  - Middle-income trap
- Floating exchange rate as resilience enhancer
  - If debt in domestic denominated currency
- Capital flows and US monetary policy
- Global safe asset – resilience for advanced economies
- Sovereign Debt Restructuring, IMF's SDR, ...

# 02/24/22 Watershed Moment on Global Economic Order

- **Pre:** mutual interdependencies to ensure peace  
make wars expensive
- **Trade:** Global Value Chains, “just-in-time” ⇒ low  $\pi$   
Trade bring (political) change – “Wandel durch Handel”
- **Post: Resilience:** “just-in-case”, autarky, self-reliance
  - More than **slowbalization** (?) - sanctions

# The Future of Globalization (Slowabilization)

- “Slowbalization” (in trade), Deglobalization (in services, technology transfers)

- From **cost minimization** to **Resilience**
  - **Just-in-Time** **Just-in-Case**
- **Cheap** **Reliable/sustainable**
- Cheapest supplier/country **3 different suppliers (multi-sourcing) from 3 different continents**

Fragmentation via  
“Friend-shoring”

GVC Stresstests

# 02/24/22 Watershed Moment on Global Economic Order

- **Pre:** mutual interdependencies to ensure peace  
make wars expensive
- **Trade:** Global Value Chains, “just-in-time”  $\Rightarrow$  low  $\pi$   
Trade bring (political) change – “Wandel durch Handel”
- **Finance:** Cross-border investments – open capital account  
EM \$-reserve holdings to offset capital outflows  $\Rightarrow$  low  $r$
- **Post: Resilience:** “just-in-case”, autarky, self-reliance
  - More than **slowbalization** (?) - sanctions
  - End of “peace dividend”, **rearmament**
  - + **green transition**  $\Rightarrow$  higher  $\pi, r^*$
  - + **Covid shock in China**
  - More capital control (?) ... **fewer \$-reserves**

# “Inflation Whipsaw”

5 Year Breakeven Inflation Rate (TIPS)

- **2 traps** (“resilience destroyers”)
  - Deflation trap
  - Inflation trap (fiscal + financial dominance)
- **Independence** central bank + **MacroPru**
  - Accelerator and breaks

# US Monetary Policy: “Transitory” Gamble for US, Downside for EMDC

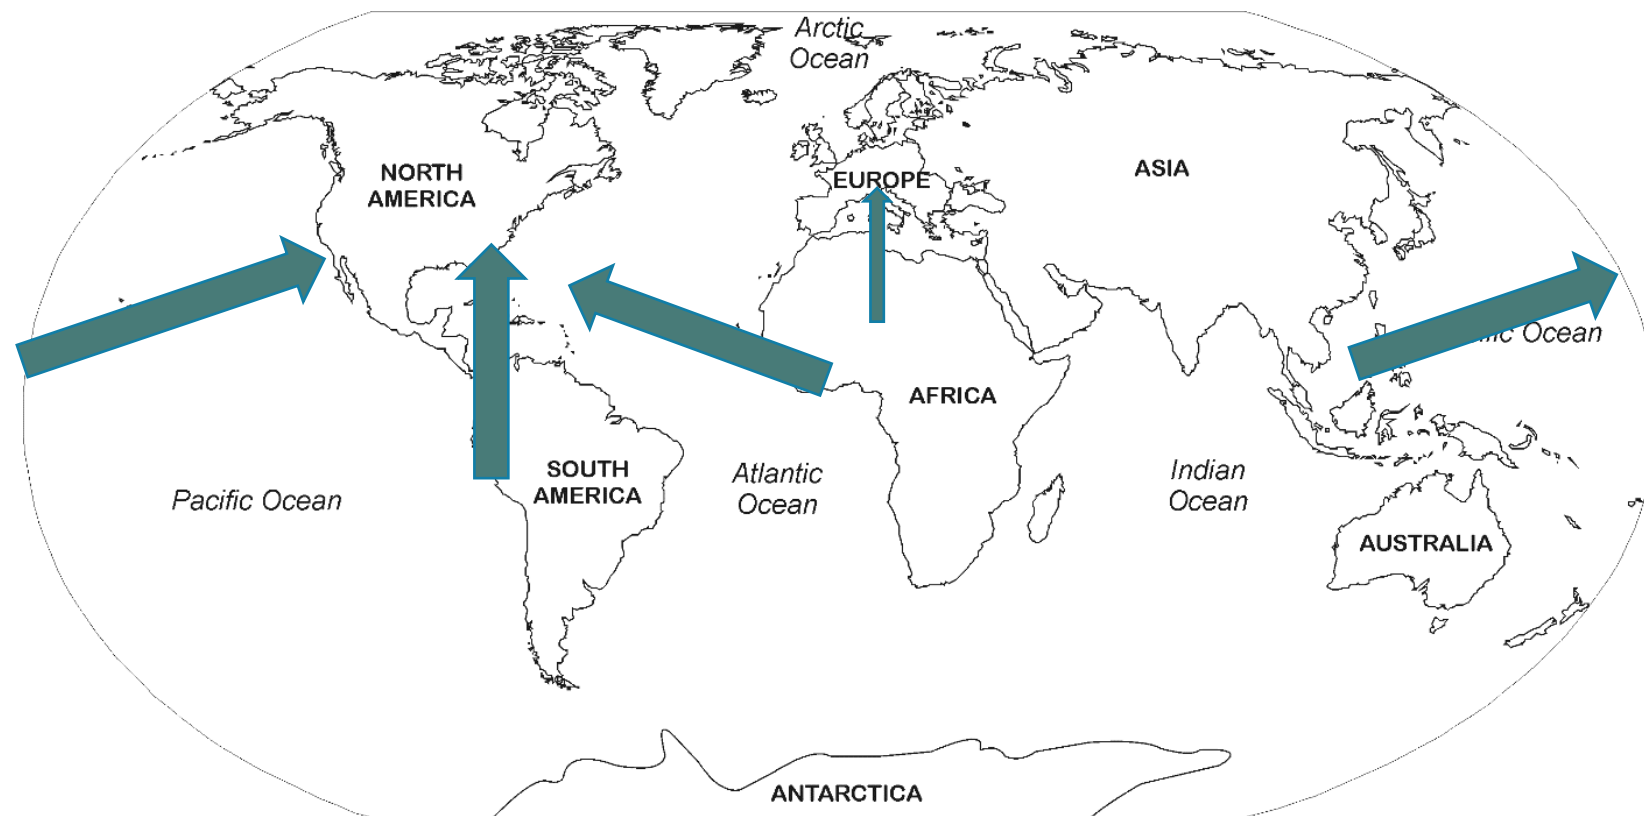

- Supply shortages relative to demand excesses
  - Record imports from China + now: inflation in “core services”
- To bring inflation down – avoid **de-anchoring** of inflation expectations  
Taylor Principle  $\phi_\pi > 1$ , i.e. **real rate  $r^\$$  increase**
  - **High debt level:** debt sustainability  $\Rightarrow$  financial instability  
MoPo more sensitive/error prone
  - **MoPo spillovers to EMDC**  $\Rightarrow$  Flight-to-Safety - SS (loss of (local) safe-asset status)
    - $r^{EM} < g^{EM} \downarrow$  to sustain local EMDC safe asset
    - $r^{EM} \uparrow \geq r^\$ \uparrow$  to be attractive relative to US Treasury

# International: Flight to Safety

- Risk-on, Risk-off      Flight-to-safe asset
- Problem: Safe asset is *asymmetrically supplied* by AE  
Flight-to-safety      →      cross-border capital flows

# International: Flight to Safety

- Risk-on, Risk-off                      Flight-to-safe asset
- Problem: Safe asset is *asymmetrically supplied* by AE  
Flight-to-safety      ➔      cross-border capital flows
- At times of global crisis, issuance of new debt
  - For AE      at inflated prices                      eases conditions
  - For EME      at depressed prices                      worsens conditions
- Question: *Who insures whom?*      “*Poor insure rich Paradox*”
  - Correct insurance only if  
buffer is large and debt long-term enough  
so that no new debt issuance needed &  
sell safe asset/reserves instead

# Two Approaches

- Approach 1: “Buffer Approach” *(traditional)*
  - Lean against sudden stop (flight-to-safety) capital outflows
  - Precautionary Reserves
  - IMF liquidity lines
  - Central Banks Swap line arrangements
- Approach 2: “Rechanneling Approach” *(new proposal)*
  - “Global Safe Asset from & for Emerging Economies”  
with Lunyang Huang

} Official sector

# 1. “Buffer Approach” via Reserves Holdings

- South East Asia crisis 97/98: Sudden Stop/Flight-to-Safety  
⇒ precautionary reserves
- Negative carry due to low yield of safe asset (exorbitant privilege)
  - As EME grows faster, they have to keep acquire foreign safe assets (export surplus required)
- Distorts exchange rates
- Subsidizes private carry trades
  - Carry traders undermine/undo official reserve holding
  - EME corporate sector \$-borrowing
    - Bruno & Shin 2016
  - Hungarian/Polish household €-borrowing
    - Verner 2017

# Two Approaches

- Approach 1: “Buffer Approach” *(traditional)*
  - Lean against sudden stop (flight-to-safety) capital outflows
  - Precautionary Reserves
  - IMF liquidity lines
  - Central Banks Swap line arrangements
- Approach 2: “Rechanneling Approach” *(new proposal)*
  - “Global Safe Asset from & for Emerging Economies”  
with Lunyang Huang  
(Central Bank of Chile Conference 2017)  
formal analysis

} Official sector

## 2. Approach: “Rechanneling”

- Address root cause: Safe asset is supplied asymmetrically

## 2. Approach: “Rechanneling” with GloSBies

- Address root cause: Safe asset is supplied asymmetrically
- Create globally supplied safe asset via pooling & tranching

## 2. Approach: “Rechanneling” with GloSBies

- Address root cause: Safe asset is supplied asymmetrically
- Create globally supplied safe asset via pooling & tranching

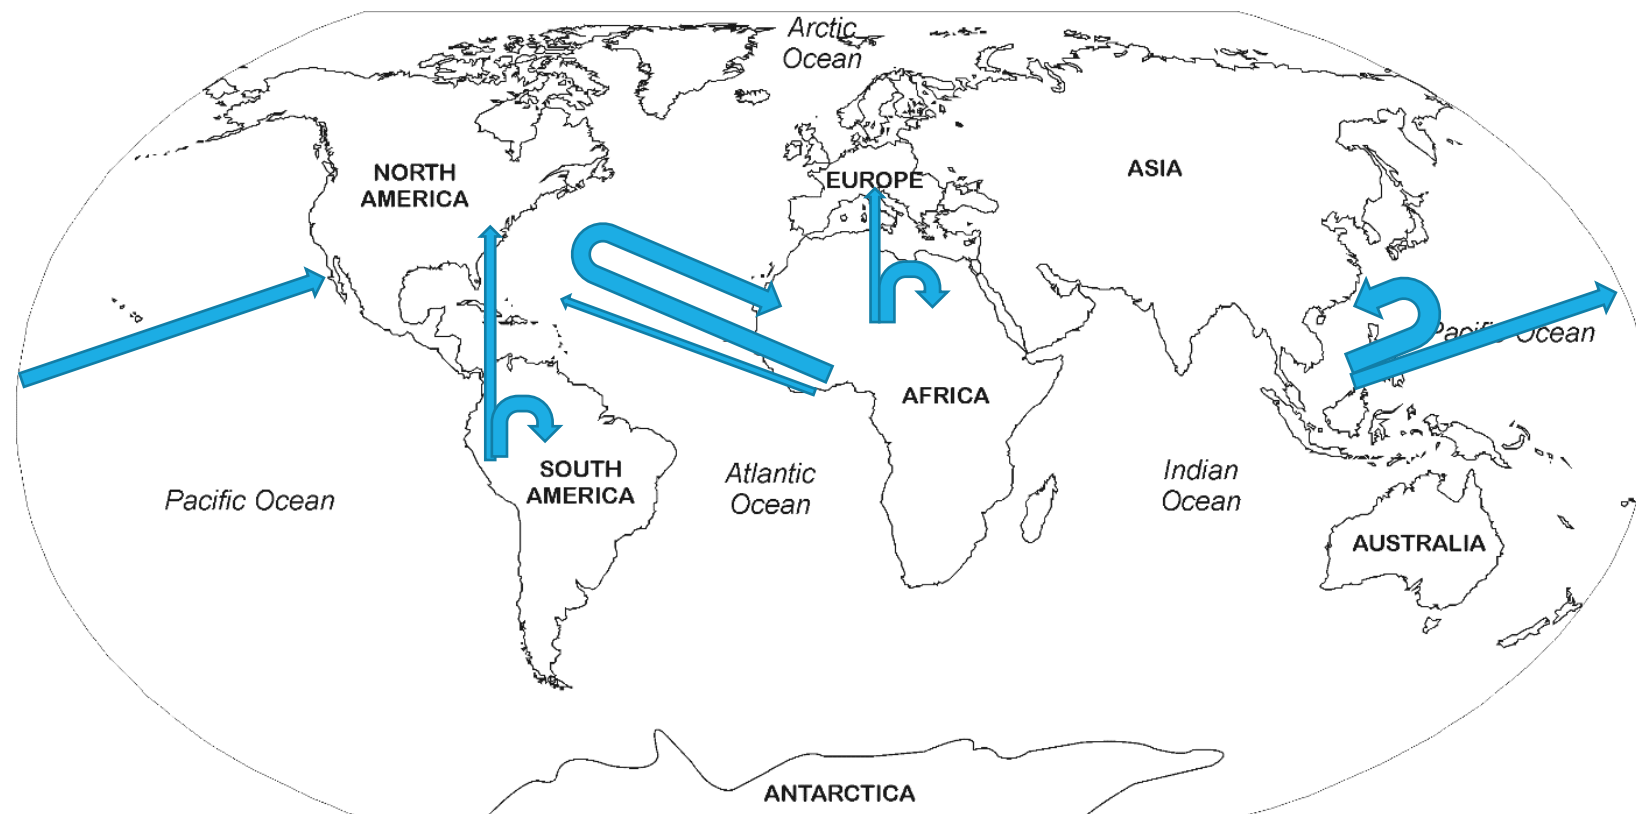

*Rechannel:*  
Instead of cross-border  
Across asset classes

- Expand ESBies idea for euro area to EME:  
“SBBS (Sovereign-Bond Backed Securities) for the world”

Euro-nomics group 2011, 2016, 2017

# International: Flight to Safety

- Risk-on, Risk-off → Flight to **safe asset**
- Channels back some of flight-to-safety capital flows  
fewer **cross-border** capital flows

# Self-stabilizing Global Financial Architecture

- High Debt Level
  - Domestic Challenge: Central Bank independence
  - International Challenge: Flight-to-Safety
- Global Financial Architecture
  - Buffer approach interventionistic
    - Reserve holding costly due to cost of carry & distortionary
    - IMF support very limited
    - Swap lines Limited (not all IMF member countries)
  - Rechanneling approach self-stabilizing (autonomous)
- Tranching completes the market
  - Allows catering to investors groups with different risk attitudes
  - Makes EME less crisis prone
- International pooling and tranching
  - SBBS/ESBies for the world
  - Expands WorldBank/IMF's fire power

# Climate Change Sustainability and Resilience

# Sustainability

- Resilience + is not enough
- No adverse trend

# Climate Change Challenge

- Global Lockdown in 2020
  - Reduction of CO2 emission was minimal
- Three-prong strategy
  - Mitigation - electric vehicles
  - Adaptation – high-tech dikes
  - Amelioration – geoengineering
- Double-externality: R&D and pollution
  - “Climate Clubs”
- Chicken-Egg problem (QWERTY)

Climate change  
understanding counterfactual

Resilience strategy is more likely: Let climate change show up

# Risks and Climate Change

- Types of risks

- Directly from **climate events**
- Uncertainties of **existing** climate **policies**
- Uncertainties of **future** climate **policies**

“stranded assets”

- Incorporated in

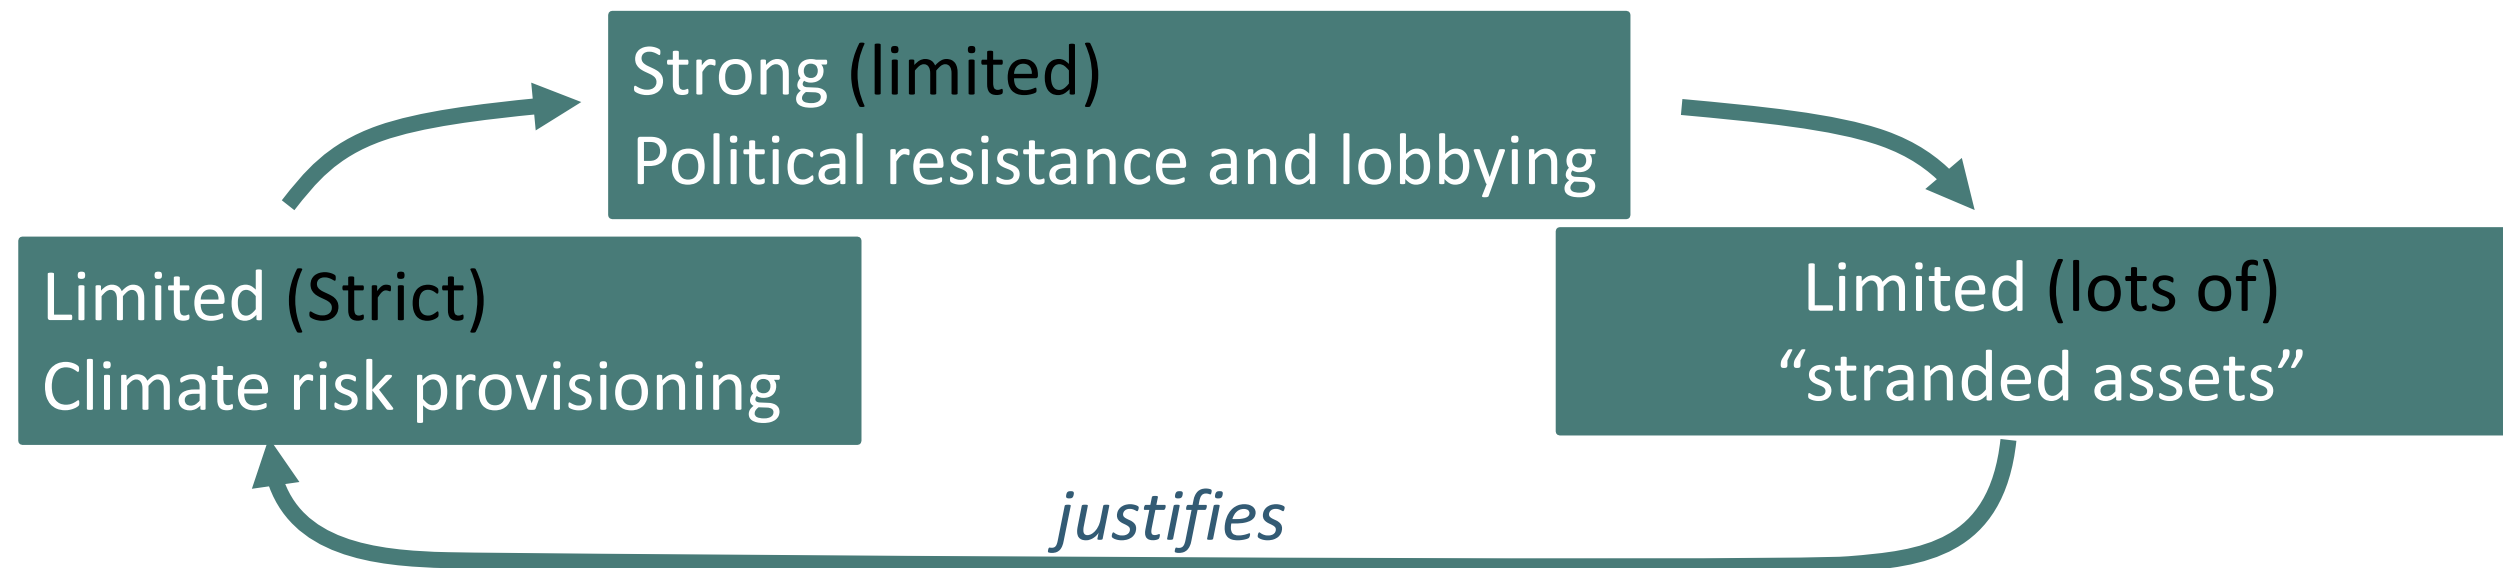

- Stress tests
- Internal Capital Adequacy Assessment Process (ICAAP)
- Portfolio of insurance companies, institutional investors, asset managers
- Parallel and integrated climate and macro scenarios

See Brunnermeier and Landau (2021). “Finance, Money, and Climate Change” (Economic Policy)

# Risks and Climate Change: Stranded Assets

- Types of risks
  - Directly from **climate events**
  - Uncertainties of **existing** climate **policies**
  - Uncertainties of **future** climate **policies**

} “stranded assets”

- “Climate risk dominance” analogous to “financial dominance”

# Green finance: Conceptual issues

- Distorting **wrong** adjustment **margin**
  - $Y = A F(\text{Labor}, \text{Capital}, \text{Pollution})$ 
    - Distort labor capital ratio -> tilt towards less capital intensive production
    - Risky firms: distort more
- **Price on resource vs. price on risk**
- **Policy uncertainty “tax”** (legislation risk premium)
  - Can be Pigouvian – steering towards green
  - No tax revenue – socially waisted in risk premia  
(goes to capital investors to compensate their disutility)

# Resilience and Time Inconsistency

- **Fix**, clear policy path that removes policy uncertainties **Ex-ante**
  - Pre-specified price of CO2/carbon
  - Removing uncertainty - stirs private investments (given low  $i$ )  
**Reduces risk premium**
  - Pre-specified quantity of CO2 emissions
    - Implemented with fixed tradable permits
  - Interim solution: (Delpla)
    - Tradable permit which can be adjusted to stabilize CO2 price
- **Flexibility** – resilience (adapt, react, re-optimize, ...)
  - Esp. when tipping points become apparent

Ex-ante

Time Inconsistency

Ex-post

# Innovation and Scarring

Digitalization – Life Sciences

# Econ New Normal: Innovation and Scarring

- **Innovation:** Overcoming cannibalization, QWERTY problem, regulatory shackles

- Tele medicine/Life sciences
- Home office and real estate donut effect
- Online learning/conferencing
- Digital Money

- **Scarring:**

- Belief and preference scarring (confidence)
- Labor market scarring
- Debt overhang

# Covid and city design

- Fewer high rise buildings (lift fear)
  - From sky scrapers to office parks
  - Spread out cities ⇒ traffic
- Donut effect due to Covid for metropolitan areas
  - City centers are struggling, suburbs thriving

- Smart cities
  - Digitalization – New form of hygiene management (like sewage in 19<sup>th</sup> century)

# Outline of Book

- Part I: Society and Resilience
- Part II: 4 Elements of Resilience Management: COVID
- Part III: Macro Resilience
  - Innovation boost vs. Scarring
  - Financial whipsaw
  - Public Debt
  - Inflation whipsaw
- Part IV: Global Resilience
  - EMDE
  - Geopolitics, World order, Global finance, Value chains, Climate

# Resilience and Policy Implications

- **Health**
  - Vaccines to return to “new normal”
- **Education**
  - Foster taking initiatives, general and life-long education, no comparisons to others,
- **Macro**
  - Low interest rate  $\Rightarrow$  more fiscal, less monetary resilience
- **Finance**
  - Efficient debt restructuring -- Capital requirements (buffers)  
(to avoid debt overhang)

# Resilience and Policy Implications

- Health

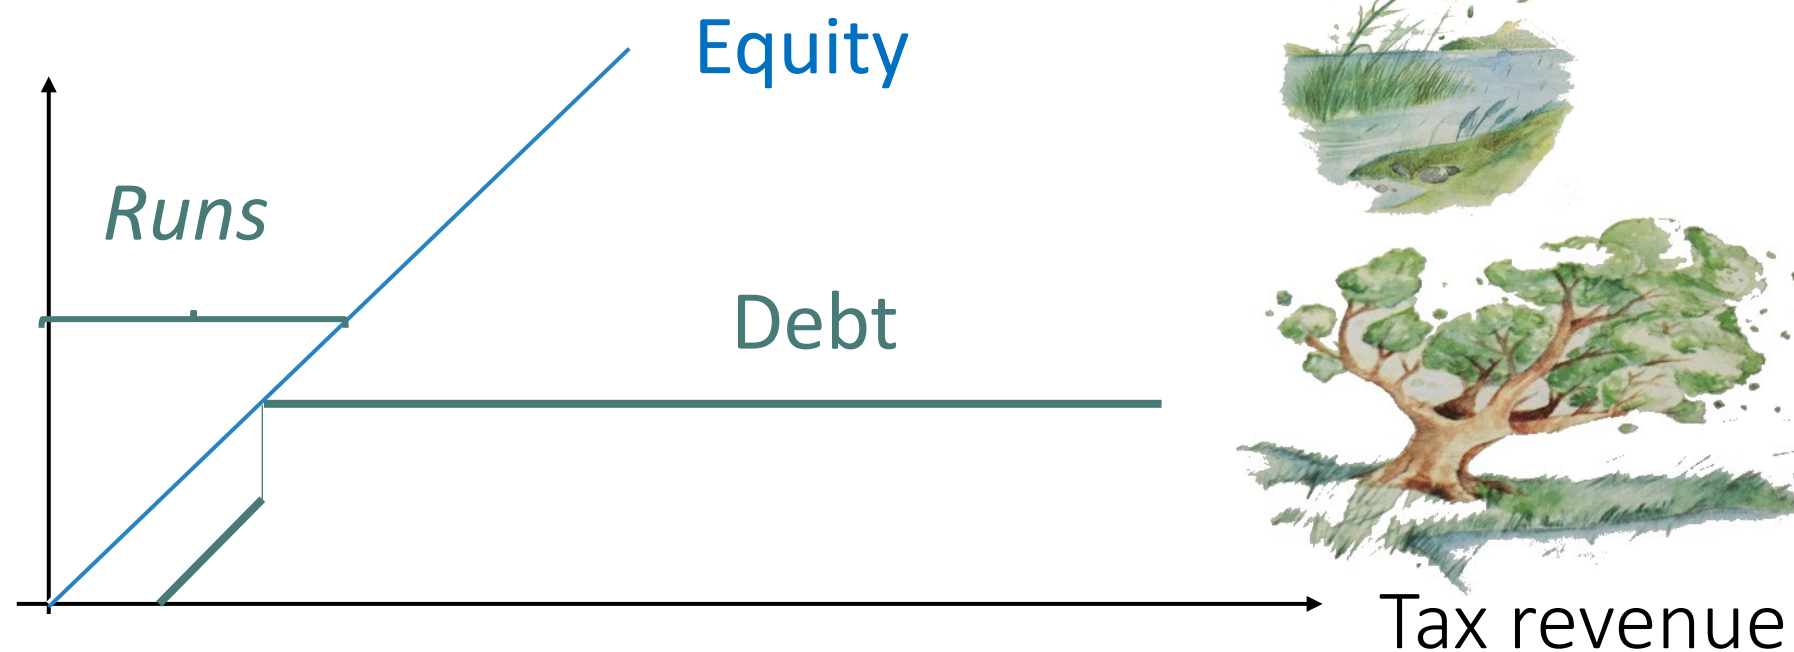

- Vaccines to return to “new normal”

- Macro

- Low interest rate  $\Rightarrow$  more fiscal, less monetary resilience

- Finance

- Efficient debt restructuring -- Capital requirements (buffers) (to avoid debt overhang)

“robust”/resistant until it breaks through “Robustness barrier”

# Resilience and Policy Implications

- **Health**

- Vaccines to return to “new normal”

- **Macro**

- Low interest rate  $\Rightarrow$  more fiscal, less monetary resilience

- **Finance**

- Efficient debt restructuring -- Capital requirements (buffers) (to avoid debt overhang)
- Distributed Ledger Technology (DLT)

- **Resilience Inequality**  $\Rightarrow$  income and wealth inequality

- **Emerging Economies** – poverty and middle income traps

- **International Macro-Finance**

- Flexible exchange rate – Foreign exchange reserves (buffers) + MacroPru (limited \$-debt)
- Poor insuring the rich: “GloSBies” and Global Role of the US dollar as safe asset

- **International Trade: Global value chains**

- From “just in time” to “just in case” -- stress tests for GVC (resilience lessons from GFC)

- **Global geopolitics** – cyber warfare

- **Climate change** – Sustainability = resilience + no adverse trend

# A Personal Conjecture

- In an increasingly complex society
- **Autocratic societies**
  - Seek **robustness** – attractive feature after crises
  - Suppression, minimize movements/disruptions
  - Surveillance
  - Tighten with each crisis ... no rebound
- **Open/democratic society**
  - More **resilient**
  - May appear wobbly when shock hits but internal mechanism allow for rebound
  - Open to mavericks
  - Transparency and more information flow/aggregation

*Good in*

■ *Enforcing rules*

■ *Invented universally  
accepted vaccines*

# Outline of Book

- Part I: Society and Resilience
  - Part II: 4 Elements of Resilience Management: COVID
  - Part III: Macro Resilience
    - Innovation boost vs. Scarring
    - Financial whipsaw
    - Public Debt
    - Inflation whipsaw
  - Part IV: Global Resilience
    - EMDE
    - Geopolitics, World order, Global finance, Value chains, Climate
- 

# Resilience and the Slope of the Yield Curve

## ■ Resilient path

Resilience and the slope of the yield curve

- Increasing  $\Rightarrow$  resilience ( $\nabla$  recessions)
- Flat  $\Rightarrow$  random walk (permanent)

# Resilience: Debt vs. Equity

“robust”/resistant until it breaks through “Robustness barrier”

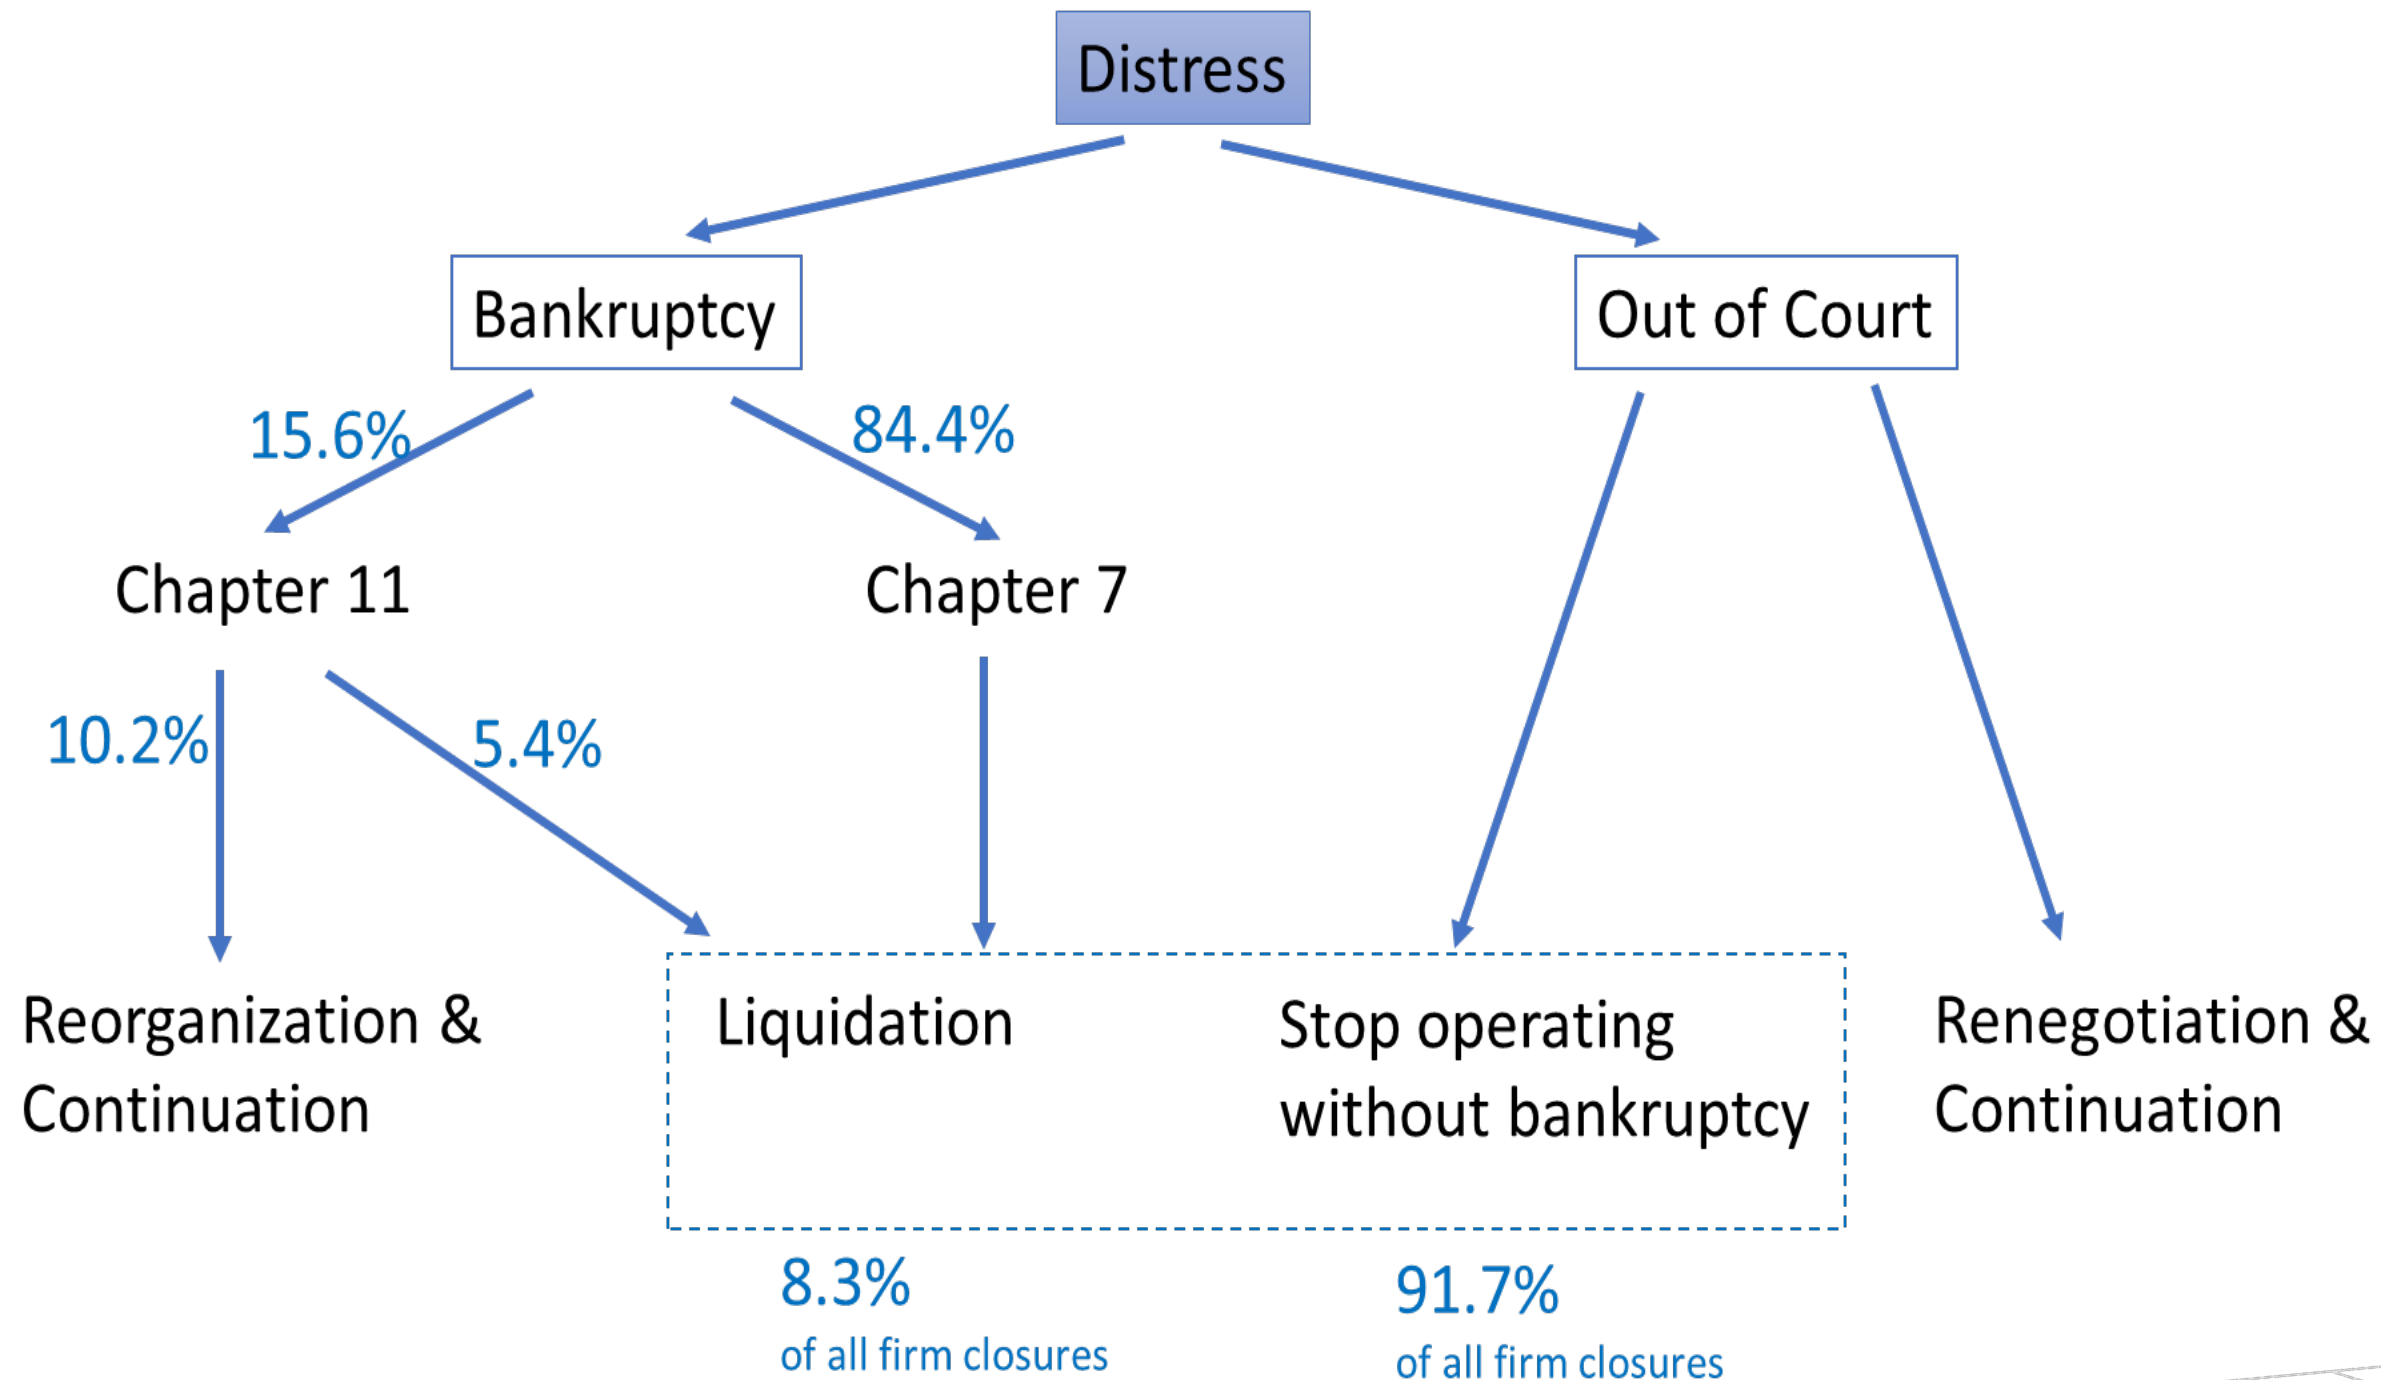

Equity

# Resilience enhancer: Bankruptcy Protection

- Bankruptcy in US:

# “Financial Markets Whipsaw”

- Robustness
- Resilience:

Equity capital = buffer/redundancies

Efficient **Debt Restructuring**

**Lender of last resort** by central banks

# “Financial Markets Whipsaw”: Stocks and Corporate Bonds

- March 2020 shivers followed by strong recovery
  - **Stock market** record heights – IPOs like during NASDAQ bubble
  - **Corporate bond market** CB: Tail risk removal

# “Financial Markets Whipsaw”: US Treasury

- March 2020 shivers followed by strong recovery

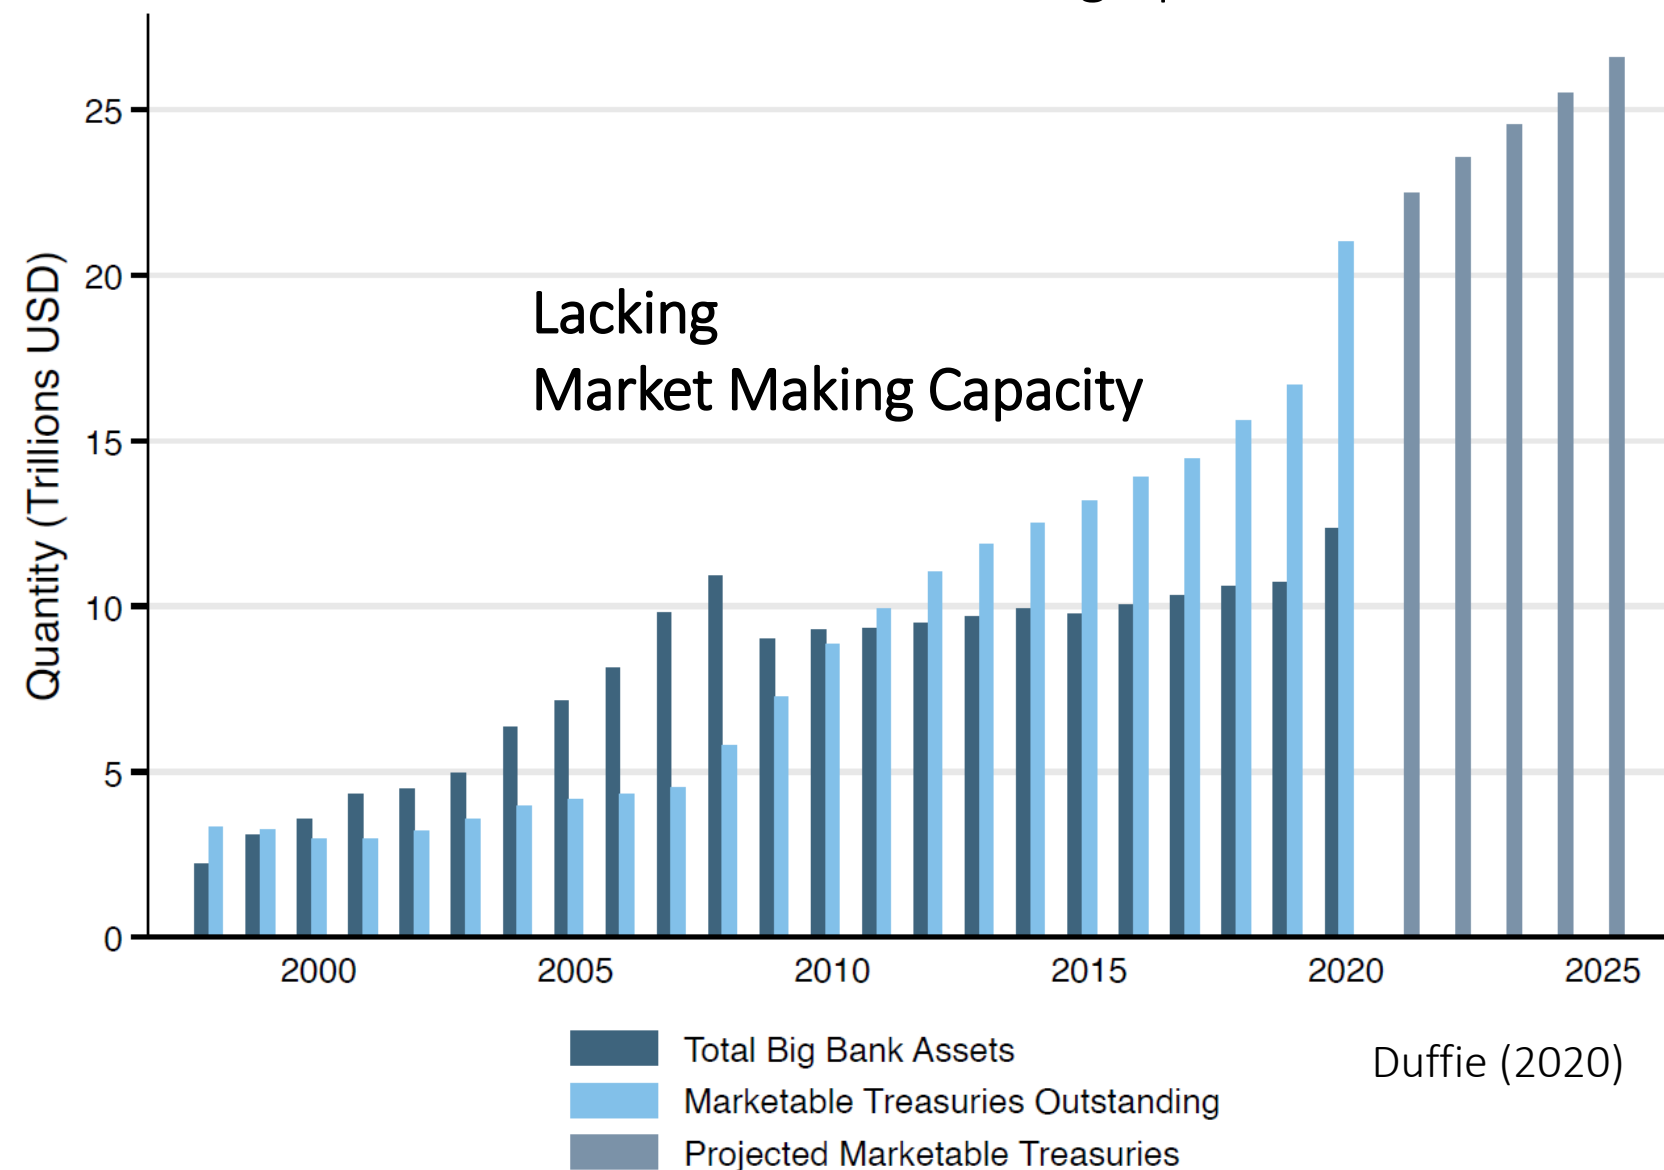

- **Gov. bond market shivers**

**CB: Market maker of last resort** to preserve safe asset status

- What’s a safe asset?

Precautionary savings:  $\text{Asset Price} = E[\text{PV}(\text{cash flows})] + E[\text{PV}(\text{service flows})]$

- Good friend: can sell at high price and low-bid ask spread in crisis times

# Fiscal Inflation Link
